RE: Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of  
candidates announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on  
announced list for Hydraulic Fracturing Science Advisory Board

FROM: Jeanette Ammon LMT, (steward for god and nature)

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of  
candidates for possible inclusion on the Science Advisory Board on Hydraulic  
Fracturing.

I am writing to support the appointment of the following 26 names to the SAB  
for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on  
their scientific expertise, knowledge, experience and ability to be  
impartial. Following this list is a second list of those whose appointment  
I strongly oppose and urge USEPA to reject, based on USEPA criteria and  
either their direct conflicts of interest, lack of scientific expertise,  
and/or clear lack of ability to be impartial as evidenced in their  
publications and public speaking. Many in this list also do not have  
complete conflict of interest disclosures in their bios.

Given the record of deep shale drilling and high pressure horizontal  
hydraulic fracturing to result in water contamination, air pollution,  
increased ghg emissions, community disruption, illnesses, and deaths of  
humans and animals, and the overwhelming environmental and carbon footprints  
of this industrial process, it is essential that federal regulatory efforts  
be painstakingly clear of industry bias and conflicts of interest.

Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez

18. Jerome Paulson

19. Joseph N. Ryan, U. of Colorado, Boulder

20. Daniel Schlenk

21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.

22. Geoffery Thyne

23. Jeanne Van Briessen

24. Avner Vengosh

25. Perry R. Walker

26. Paul Westerhoff

The scientific credibility of the EPA is damaged by committees with real or perceived bias

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital

mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have

field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)

4. Stephen Bachu

5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.

6. Baldassare, Fred. Conflict of interest.

7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations

8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.

9. James Bruckner—financial ties to industry

10. Burnett, David

11. Buscheck, Timothy E

12. Gail Charnley – Conflict of interest: consults regularly with industry per her cv.

13. Corrie Clark

14. Cline, Scott Bradley

15. Nancy Pees Coleman

(<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)

16. Collins, James W

17. Corra, John—WY political conflict of interest

18. Eric Daniels (Chevron)

19. Thomas Davis, CO School of Mines

20. Joseph deGeorge (Merck)

21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)

22. Lloyd East (Halliburton)

23. Economides, Michael (consultant; editor-in-chief Energy Tribune)

24. Timothy Ellison (Exxon-Mobil)

25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:

[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))

26. Derek Elsworth

<http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: "One of these concerns [with deep-shale

drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute no, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation:

[ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf))

28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” (hdrinc.com) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry

31. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”

32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement

33. Jester, Stephen, ConocoPhillips

34. George E. King, Apache Corp.

35. Gary Klecka, worked for Dow for most of this career; now an independent consultant

36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All’s Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies’ consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having “developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing

bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe<sup>6+</sup> can be wholly recycled and reused for well site-completion operations.”

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:

[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective.

([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/))

This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that “gas as better than coal”

[lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:

[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabbors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Thank you and remember God Is Watching! and so is the world!

RE: Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of candidates announced at Yosemite.epa.gov re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study. The list below has been provided by citizen experts in my region, who I join in support for advocating the selection of a transparent, impartial, and academically "science-based" Board. I wholeheartedly endorse the recommendations below.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. Following this list is a second list of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts

of interest.

Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:

1. Henry Anderson
2. Michel Boufadel
3. Susan Brantley
4. Bruce Brownawell
5. Janice Chambers
6. David A. Dzombak
  
7. Robert Edstrom
8. Elaine M. Faustman
9. Madelon L. Finkel
10. Fred M. Henretig
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy
17. Ingrid Padilla
18. Jerome Paulson
19. Joseph N. Ryan
20. Daniel Schlenk
21. Dr. Karen Swackhamer
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

The scientific credibility of the EPA is damaged by committees with real or perceived bias

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and

the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias.

Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in

their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article (examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: "In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal Environmental Health Perspectives about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague

disputed having a conflict of interest.”

17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:  
[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Ellsworth  
<http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>:

“One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Ellsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute no, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry

(NC presentation:

28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry

31. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”

32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement

33. Jester, Stephen, ConocoPhillips

34. George E. King, Apache Corp.

35. Gary Klecka, worked for Dow for most of this career; now an independent consultant

36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”

37. Steven Lewis, Exxon-Mobil for most of his career.

38. Abby Li, most of her career at Monsanto

39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All’s Not Well)

40. Keith Wilson Lynch

41. Dean Malouta (most of his career with Shell)

42. Steve Mamerow (Pioneer Natural Resources)

43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry

44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.

45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.

46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.

47. Nygaard, KJ, Exxon Mobil

48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."
53. Richard Phillips, Exxon Mobil since 1988
54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.
55. Danny Reible
56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already "better casing standards" as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that "gas is better than coal"  
[lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.
57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:  
[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
59. Joseph Patrick Smith, Exxon
60. Richard K Smith, Nabbors Production Company
61. Paul Street, Nalco chemical company
62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.
63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
65. Sanjay Vittale, Shell Oil
66. Douglas Wyatt, URS Corporation—conflict of interest
67. Victor Ziegler, Occidental Petroleum

Sincerely,

Jean Andrews

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased green house gas (ghg) emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it**

**is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Dept.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez

18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias.**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and

competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate.* **However, individuals with financial conflicts should not be serving as members of the SAB.**

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](#), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the

effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)

4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: “In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal *Environmental Health Perspectives* about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest.”
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Ellsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Ellsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t

an absolute *no*, but it's likely you won't develop connections between these because you get intervening beds of low permeability that don't allow transmission.' ...As for abandoned wells causing contamination, he stressed good management. 'Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.'"

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate's inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last "hundreds of years" is another indication of the candidate's lack of inclination to evaluate this technology's ability to be protective of water and human health for future generations as USEPA's mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%202018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf)

[LRC/Meetings/2012%20January%202018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%202018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf))

28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A "water rights" specialist, who "after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission..."

([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry

31. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"

32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement

33. Jester, Stephen, ConocoPhillips

34. George E. King, Apache Corp.

35. Gary Klecka, worked for Dow for most of this career; now an independent consultant

36. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."

37. Steven Lewis, Exxon-Mobil for most of his career.

38. Abby Li, most of her career at Monsanto

39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)

40. Keith Wilson Lynch

41. Dean Malouta (most of his career with Shell)

42. Steve Mamerow (Pioneer Natural Resources)

43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry

44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and

production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.

45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.

46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.

47. Nygaard, KJ, Exxon Mobil

48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.

49. John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.

50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.

51. Thomas Parkerton, Exxon Mobil entire career

52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having “**developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations.”

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:

[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-)

[process#.UMrNpHPjlzc](#), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](#)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabbors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Thank you for your consideration of my comments.

U.S. EPA Science Advisory Board

Re: Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of candidates announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon,

The following are my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing. (I have also attached my comments as a text document.) I am writing to support the appointment of the following 34 experts to the SAB for the U.S. EPA Hydraulic Fracturing study because of their scientific background, knowledge, experience, expertise, and impartiality. Please note that *following* the list of candidates whose appointment I support, there is *a second list* of candidates whose appointment I strongly oppose.

The hydraulic fracturing boom in my area and across the country has impacted many communities and families. Unfortunately, the impact has been very mixed. Water contamination and air pollution have led to health problems in humans and animals and to the deaths of livestock. Leaks of volatile organic compounds, methane and other gases from wells as well as diesel exhaust from generators and vehicles are contributing to illness as well as to climate change. Inadequate well casings leak produced water laced with carcinogenic chemicals both man-made and naturally occurring and with naturally-occurring radioactive elements. It is easy to see that our increasingly precious freshwater resources are at risk.

With so much at stake, it is absolutely imperative that federal regulation be transparent and free from industry bias and conflicts of interest.

Please appoint the SAB from among qualified, impartial candidates. The following people would be excellent choices for this board. Please consider appointing the board from among these candidates:

1. Daniel Acosta, Jr.
2. Richelle Allen-King
3. Akram Alshawabkeh
4. Henry Anderson

5. Jerad Bales
6. Michel Boufadel
7. Elizabeth Boyer
8. Susan Brantley
9. Bruce Brownawell
10. Janice Chambers
11. David A. Dzombak
12. Robert Edstrom
13. Elaine M. Faustman
14. Madelon L. Finkel
15. Daniel J. Goode
16. Fred M. Henretig
17. Robert Howarth
18. Anthony Ingraffea
19. John C. Kissel
20. Lyman McDonald
21. Lisa McKenzie
22. Karlis Muehlenbach
23. Eileen Murphy
24. Ingrid Padilla
25. Jerome Paulson
26. Joseph N. Ryan
27. Daniel Schlenk
28. Karen Swackhamer
29. Geoffery Thyne
30. Jeanne Van Briessen
31. Avner Vengosh
32. Perry R. Walker
33. Paul Westerhoff
34. Mark Williams

Please keep in mind the important duty of the EPA to appoint experts who are free from industry bias and conflict of interest and who are committed to protecting public health and the environment. As you are aware, the credibility of the EPA is damaged by committees with real or perceived bias. Indeed, by law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

Committee membership should exclude financially conflicted members as much as possible, so that committees are composed of scientists who are able to provide a fair and complete review of all relevant data or issues. If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following 67 are unacceptable candidates for inclusion on the SAB because of one or more of the following: conflict of interest, lack of scientific expertise, lack of impartiality. Many have not supplied complete conflict of interest disclosures.

Please reject the nominations of the following 66 unacceptable candidates:

1. Stephen W. Almond
2. W. Kenneth Armagost
3. Daniel J. Arthur
4. E. Scott Bair
5. Fred. Baldassare
6. Terence Barry
7. Thomas R. Bratton
8. James Bruckner
9. David Burnett
10. Timothy E. Buscheck
11. Gail Charnley
12. Corrie Clark
13. Scott Bradley Cline
14. Nancy Pees Coleman
15. James W. Collins
16. John Corra
17. Eric Daniels
18. Thomas Davis
19. Joseph deGeorge
20. Shari Dunn-Norman
21. Lloyd East
22. Michael Economides
23. Timothy Ellison
24. Stuart Ellsworth
25. Derek Elsworth
26. James Erb
27. Gordon Fassett
28. John V. Fontana
29. Thomas D. Hayes
30. Walter R. Hufford
31. Ron Hyden
32. Stephen Jester
33. George E. King
34. Gary Klecka
35. Philip Leber
36. Steven Lewis
37. Abby Li
38. Sean Lieske
39. Keith Wilson Lynch
40. Dean Malouta
41. Steve Mamerow
42. Carl T. Montgomery
43. Daniel Moos
44. Michael Nickolaus
45. Jean-Philippe Nicot

46. KJ Nygaard
47. Jon Olson
48. John Oneacre
49. Thomas Parkerton
50. Deepak Patil
51. Richard Phillips
52. Laura Plunkett
53. Danny Reible
54. James Saiers
55. Bert Smith
56. Donald Siegel
57. Joseph Patrick Smith
58. Richard K Smith
59. Karen Spray
60. Paul Street
61. Talib Syed
62. Geoffrey Thyne
63. James John Tintera
64. Rock Vitale
65. Sanjay Vitthal
66. Douglas Wyatt
67. Victor Ziegler

Thank you for your attention to this important matter,

Hannah Baxter

Subject: Comments on Science Advisory Board cadidttates

To: Ed Hanlon, Designated Federal Officer, EPA Science Advisory Board Staff Office

As an Ohio resident I am very concerned with safe drinking water and I appreciate the efforts of the EPA to protect this vital resource. Therefore I feel it is very important that members of the new Science Advisory Board be particularly concerned about the long term safety of our drinking water supply and not be swayed by financial concerns of profit-making corporations or individuals. I would like to recommend the following 26 people who seem to have the qualifications necessary and do not have conflicts of interest.

Thank you, Carol Beale, Athens, Ohio, 45701

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is**

**essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez

18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff
27. Mr. James Northrup

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

I also feel that independent radiation experts need be placed on this panel, given that shale can contain high levels of radioactivity and radiation is one of the contaminants that will persist in the environment the longest - and can bio-accumulate.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And

from [PR Newswire](#), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process.". (<http://s.tt/1jbFy>)

4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: "In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal *Environmental Health Perspectives* about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest."
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))

26. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))
28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”
32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement
33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
37. Steven Lewis, Exxon-Mobil for most of his career.

38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "**developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**". In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."
53. Richard Phillips, Exxon Mobil since 1988
54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate:

[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Thank you for your attention,

Lauren Berlekamp

Subject: Nominations for the SAB on fracking

Dear Mr. Hanlon,

I would like to nominate the following candidates who have shown objectivity and expertise in this field i.e. fracking. It is crucial that we protect public health at this critical juncture.

1. Henry Anderson
2. Michael Boufadel
3. Susan Brantley
4. Bruce Bonawell
5. Heather Cantino
6. Janice Chambers
7. David Dzombak
8. Robert Epstrom
9. Elaine Faustman
10. Dr. Madelon Finkle
11. Fred Henretic
12. Lyman McDonald
13. Lisa McKenzie
14. Karlis Muehlenbach
15. Eileen Murphy
16. JP Nico
17. James Northrup
18. Dr. Ingrid Padilla
19. Jerome Paulson
20. David Schlenk
21. Allen Shapiro
22. Dr. Karen Swackhamer
23. Geoffrey Thyne
24. Jeane VanBriesen
25. Avner VanGosh
26. Perry Walker
27. Paul Westerhoff
28. Anthony Ingraffea
29. Joe Ryan

Thank you for your consideration,

Renee Bogue  
Massillon, OH

I try to check my email once a day; however, if you don't hear back from me or if you need to communicate with me sooner please call my home phone. I will return your call as quickly as possible. Thank you!

**FROM:** Leah Cain, Windham, Ohio 44288

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

1. Henry Anderson
2. Boufadel, Michel

3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.

22. Geoffery Thyne

23. Jeanne Van Briessen

24. Avner Vengosh

25. Perry R. Walker

26. Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or

recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://PRNewswire), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry

10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley – Conflict of interest: consults regularly with industry per her cv.
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf))

28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” (hdrinc.com) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”
32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement
33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All’s Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies’ consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career

52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having **“developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations.”
53. Richard Phillips, Exxon Mobil since 1988
54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.
55. Danny Reible
56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective. ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that “gas as better than coal”  
[lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.
57. Bert Smith, Chesapeake
58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:  
[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
59. Joseph Patrick Smith, Exxon
60. Richard K Smith, Nabors Production Company
61. Paul Street, Nalco chemical company
62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.
63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
65. Sanjay Vittale, Shell Oil
66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Thank you for your attention,

Leah Cain

From: Glenn Campbell  
To: Edward Hanlon/DC/USEPA/US@EPA  
Date: 12/16/2012 09:50 AM  
Subject: Comments on Hydraulic Fracturing Science Advisory Board

**RE:** *Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of candidates announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board*

**FROM:** *Glenn Campbell, Lakewood, OH 44107*

**Dear Mr. Hanlon:**

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

- Henry Anderson
- Boufadel, Michel
- Susan Brantley
- Brownawell, Bruce
- Janice Chambers
- Dzombak, David A.
- Edstrom, Robert

- Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
- Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
- Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
- Robert Howarth
- Anthony Ingraffea
- Lyman McDonald statistician and biologist
- Lisa McKenzie
- Karlis Muehlenbach
- Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
- Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
- Jerome Paulson
- Joseph N. Ryan, U. of Colorado, Boulder
- Daniel Schlenk
- Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
- Geoffery Thyne
- Jeanne Van Briessen
- Avner Vengosh
- Perry R. Walker
- Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias.** Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

**On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption.**

**This *scientific* review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.**

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

- Stephen Almond, MeadWestvaco
- W. Kenneth Armagost, Andarko Petroleum
- Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're

going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process.". (<http://s.tt/1jbFy>)

- Stephen Bachu
- E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
- Baldassare, Fred. Conflict of interest.
- Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
- Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
- James Bruckner—financial ties to industry
- Burnett, David
- Buscheck, Timothy E
- Gail Charnley – Conflict of interest: consults regularly with industry per her cv.
- Corrie Clark
- Cline, Scott Bradley
- Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGas> NancyColeman-8-7-12.pdf)
- Collins, James W
- Corra, John—WY political conflict of interest
- Eric Daniels (Chevron)
- Thomas Davis, CO School of Mines
- Joseph deGeorge (Merck)
- Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
- Lloyd East (Halliburton)
- Economides, Michael (consultant; editor-in-chief Energy Tribune
- Timothy Ellison (Exxon-Mobil)
- Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
- Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: "One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. 'Certainly you're making pathways in the deep strata that didn't previously exist, but those are maybe a couple of kilometres away from your drinking water. You can't say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates,

permeability, tracers and how fast tracers move. This isn't an absolute *no*, but it's likely you won't develop connections between these because you get intervening beds of low permeability that don't allow transmission.' ...As for abandoned wells causing contamination, he stressed good management. 'Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.'"

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate's inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last "hundreds of years" is another indication of the candidate's lack of inclination to evaluate this technology's ability to be protective of water and human health for future generations as USEPA's mandate requires.

- James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))
- Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A "water rights" specialist, who "after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission..." ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
- Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."
- Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
- Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"
- Ron Hyden, Director of Technology for Halliburton's Production Enhancement
- Jester, Stephen, ConocoPhillips
- George E. King, Apache Corp.
- Gary Klecka, worked for Dow for most of this career; now an independent consultant
- Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."
- Steven Lewis, Exxon-Mobil for most of his career.
- Abby Li, most of her career at Monsanto
- Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
- Keith Wilson Lynch
- Dean Malouta (most of his career with Shell)
- Steve Mamerow (Pioneer Natural Resources)
- Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
- Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions

and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.

- Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
- Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
- Nygaard, KJ, Exxon Mobil
- Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
- John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
- Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
- Thomas Parkerton, Exxon Mobil entire career
- Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having “developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations.”
- Richard Phillips, Exxon Mobil since 1988
- Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate: [epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad). Her presentations show bias as suggested by financial conflict of interest.
- Danny Reible
- James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective. ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that “gas as better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-)

[drilling-process#.UMrNpHPjlzc](#), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.

- Bert Smith, Chesapeake
- Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](#)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
- Joseph Patrick Smith, Exxon
- Richard K Smith, Nabbors Production Company
- Paul Street, Nalco chemical company
- Talib Syed – not a scientist. Production engineer, whole career has been in industry.
- James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
- Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
- Sanjay Vittale, Shell Oil
- Douglas Wyatt, URS Corporation—conflict of interest
- Victor Ziegler, Occidental Petroleum

Thank you for your attention,

Glenn Campbell

1200 Pennsylvania Ave., N.W., Washington, D.C. 20460

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please accept and convey the following as my comments (8 pages) on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

27. Henry Anderson

28. Boufadel, Michel

29. Susan Brantley

30. Brownawell, Bruce

31. Janice Chambers
32. Dzombak, David A.
33. Edstrom, Robert
34. Elaine M. Faustman
35. Dr. Madelon L. Finkel
36. Henretig, Fred M.
37. Robert Howarth
38. Anthony Ingraffea
39. Lyman McDonald
40. Lisa McKenzie
41. Karlis Muehlenbach
42. Eileen Murphy
43. Dr. Ingrid Padilla
44. Jerome Paulson
45. Joseph N. Ryan
46. Daniel Schlenk
47. Dr. Karen Swackhamer
48. Geoffery Thyne
49. Jeanne Van Briessen
50. Avner Vengosh
51. Perry R. Walker
52. Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are*

*appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

68. Stephen Almond, MeadWestvaco
69. W. Kenneth Armagost, Andarko Petroleum
70. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://PR.Newswire), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process.". (<http://s.tt/1jbFy>)
71. Stephen Bachu
72. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed in submitted bio.
73. Baldassare, Fred. Conflict of interest.
74. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
75. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
76. James Bruckner—financial ties to industry
77. Burnett, David
78. Buscheck, Timothy E
79. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: "In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal *Environmental Health Perspectives* about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest."

80. Corrie Clark
81. Cline, Scott Bradley
82. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
83. Collins, James W
84. Corra, John—WY political conflict of interest
85. Eric Daniels (Chevron)
86. Thomas Davis, CO School of Mines
87. Joseph deGeorge (Merck)
88. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
89. Lloyd East (Halliburton)
90. Economides, Michael (consultant; editor-in-chief Energy Tribune)
91. Timothy Ellison (Exxon-Mobil)
92. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
93. Derek Ellsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Ellsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

94. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf))
95. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...”

(hdrinc.com) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

96. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."
97. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
98. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"
99. Ron Hyden, Director of Technology for Halliburton's Production Enhancement
100. Jester, Stephen, ConocoPhillips
101. George E. King, Apache Corp.
102. Gary Klecka, worked for Dow for most of this career; now an independent consultant
103. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."
104. Steven Lewis, Exxon-Mobil for most of his career.
105. Abby Li, most of her career at Monsanto
106. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
107. Keith Wilson Lynch
108. Dean Malouta (most of his career with Shell)
109. Steve Mamerow (Pioneer Natural Resources)
110. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
111. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
112. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
113. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
114. Nygaard, KJ, Exxon Mobil
115. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
116. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
117. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
118. Thomas Parkerton, Exxon Mobil entire career
119. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current

employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having **“developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations.”

120. Richard Phillips, Exxon Mobil since 1988
121. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.
122. Danny Reible
123. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.
124. Bert Smith, Chesapeake
125. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
126. Joseph Patrick Smith, Exxon
127. Richard K Smith, Nabbors Production Company
128. Paul Street, Nalco chemical company
129. Talib Syed – not a scientist. Production engineer, whole career has been in industry.
130. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
131. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
132. Sanjay Vittale, Shell Oil
133. Douglas Wyatt, URS Corporation—conflict of interest
134. Victor Ziegler, Occidental Petroleum

Thank you for your attention,

From: "Lynn Chapman"  
To: Edward Hanlon/DC/USEPA/US@EPA  
Date: 12/19/2012 02:41 PM  
Subject: SAB Panel Candidates

Dear Mr. Hanlon:

I am an Ohio resident. The Ohio Department of Natural Resources (ODNR) and its spin-off, the Division Of Oil and Gas Resources Management (DOGRM) have established near dictatorial control over regulation of the oil and gas industry within the state. In practice, this self regulation is tantamount to non-regulation. For the past two years I have witnessed the results of the incestuous relationship between the drilling industry and its supposed regulators. I can provide numerous documented and specific examples of violations of Ohio's advertised "most stringent (drilling) regulations in the US". Although these violations involve basic health, safety and protection of the environment for conventional drilling/production operations, the entrenched regulatory culture guarantees more of the same for shale gas and oil production. It appears that if it will save the industry a buck, all regulations are "negotiable" with the state. SAB members on either the direct or indirect payroll of the oil and gas industry have inherent conflicts of interest and are undoubtedly biased.

I therefore support nomination of the listed 27 candidates based on their scientific expertise, knowledge, and experience and especially for their impartiality.

Following this list is a second list of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please consider appointing your committee from the following 27 people, those who clearly show evidence of scientific objectivity and appropriate expertise:

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Bruce Brownawell
5. Janice Chambers
6. David A. Dzombak

7. Robert Edstrom,
8. Elaine M. Faustman
9. Dr. Madelon L. Finkel
10. Henretig
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy
17. Dr. Ingrid Padilla
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff
27. James Northrup

Please do not consider the following SAB candidates based on conflicts of interest and/or lack of scientific objectivity and appropriate expertise:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)

4. Stephen Bachu
5. E. Scott Bair - conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner-financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley - Conflict of interest: consults regularly with industry per her cv.
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman  
(<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John-WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:  
[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Elsworth  
<http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: "One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. 'Certainly you're making pathways in the deep strata that didn't previously exist, but those are maybe a couple of kilometres away from your drinking water. You can't say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn't an absolute no, but it's likely you won't develop connections between these because you get intervening beds of low permeability that don't allow transmission.' ...As for abandoned wells causing contamination, he stressed good management. 'Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you

manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years."

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate's inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last "hundreds of years" is another indication of the candidate's lack of inclination to evaluate this technology's ability to be protective of water and human health for future generations as USEPA's mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation:

28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A "water rights" specialist, who "after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission..." (hdrinc.com) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry

31. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"

32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement

33. Jester, Stephen, ConocoPhillips

34. George E. King, Apache Corp.

35. Gary Klecka, worked for Dow for most of this career; now an independent consultant

36. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."

37. Steven Lewis, Exxon-Mobil for most of his career.

38. Abby Li, most of her career at Monsanto

39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)

40. Keith Wilson Lynch

41. Dean Malouta (most of his career with Shell)

42. Steve Mamerow (Pioneer Natural Resources)

43. Carl T. Montgomery, NSI Technologies works for industry, paid

promoter of industry

44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.

45. Michael Nickolaus-not a scientist, works for industry-funded (American Petroleum Institute among others) organization.

46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.

47. Nygaard, KJ, Exxon Mobil

48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.

49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.

50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.

51. Thomas Parkerton, Exxon Mobil entire career

52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC -industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already "better casing standards" as possibly being adequately protective.  
([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing)) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that "gas as better than coal" ([lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc)), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.
57. Bert Smith, Chesapeake
58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:  
[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
59. Joseph Patrick Smith, Exxon
60. Richard K Smith, Nabbors Production Company
61. Paul Street, Nalco chemical company
62. Talib Syed - not a scientist. Production engineer, whole career has been in industry.
63. James John Tintera - not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
64. Rock Vitale, Environmental Standards, Inc.-not a scientist, works entirely for industry "managing liability". No advanced degree.
65. Sanjay Vittale, Shell Oil
66. Douglas Wyatt, URS Corporation-conflict of interest
67. Victor Ziegler, Occidental Petroleum

From: Tom Cvetkovich

Subject: fracking SAB

Modern high pressure horizontal fracking technology promises to be one of the largest terra-forming experiments humans have ever undertaken.

Please consider the evaluations of environmentalist (such as Heather Cantino.) Do not fill the SAB with industry insiders. Consider our children's children, consider the vagaries of natural systems (geology and hydrology), and the reality of human caused global warming.

Let us er on the side of caution and move to a truly workable symbiosis with nature.

thank you,  
Tom Cvetkovich

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

**FROM:** Heather Cantino, Athens OH 45701

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

53. Henry Anderson

54. Boufadel, Michel

55. Susan Brantley

56. Brownawell, Bruce

57. Janice Chambers

58. Dzombak, David A.

59. Edstrom, Robert

60. Elaine M. Faustman, Professor Depy. of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington

61. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
62. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
63. Robert Howarth
64. Anthony Ingraffea
65. Lyman McDonald statistician and biologist
66. Lisa McKenzie
67. Karlis Muehlenbach
68. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
69. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
70. Jerome Paulson
71. Joseph N. Ryan, U. of Colorado, Boulder
72. Daniel Schlenk
73. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
74. Geoffery Thyne
75. Jeanne Van Briessen
76. Avner Vengosh
77. Perry R. Walker
78. Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

135. Stephen Almond, MeadWestvaco
136. W. Kenneth Armagost, Andarko Petroleum
137. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://PRNewswire), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process.". (<http://s.tt/1jbFy>)
138. Stephen Bachu
139. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
140. Baldassare, Fred. Conflict of interest.
141. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
142. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
143. James Bruckner—financial ties to industry
144. Burnett, David
145. Buscheck, Timothy E
146. Gail Charnley
147. Corrie Clark
148. Cline, Scott Bradley
149. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
150. Collins, James W
151. Corra, John—WY political conflict of interest
152. Eric Daniels (Chevron)
153. Thomas Davis, CO School of Mines
154. Joseph deGeorge (Merck)

155. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
156. Lloyd East (Halliburton)
157. Economides, Michael (consultant; editor-in-chief Energy Tribune)
158. Timothy Ellison (Exxon-Mobil)
159. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:  
[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
160. Derek Ellsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Ellsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

161. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf))
162. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” (hdrinc.com) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
163. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
164. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
165. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”
166. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement
167. Jester, Stephen, ConocoPhillips

168. George E. King, Apache Corp.
169. Gary Klecka, worked for Dow for most of this career; now an independent consultant
170. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
171. Steven Lewis, Exxon-Mobil for most of his career.
172. Abby Li, most of her career at Monsanto
173. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All’s Not Well)
174. Keith Wilson Lynch
175. Dean Malouta (most of his career with Shell)
176. Steve Mamerow (Pioneer Natural Resources)
177. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
178. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
179. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
180. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
181. Nygaard, KJ, Exxon Mobil
182. Jon Olson funding from oil and gas companies’ consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
183. John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
184. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
185. Thomas Parkerton, Exxon Mobil entire career
186. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having “**developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters

treated with Fe6+ can be wholly recycled and reused for well site-completion operations.”

187. Richard Phillips, Exxon Mobil since 1988
188. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.
189. Danny Reible
190. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective. ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that “gas as better than coal”  
[lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.
191. Bert Smith, Chesapeake
192. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:  
[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
193. Joseph Patrick Smith, Exxon
194. Richard K Smith, Nabbors Production Company
195. Paul Street, Nalco chemical company

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

**On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.**

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum

3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://PRNewswire), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)

4. Stephen Bachu

5. E. Scott Bair – conflict of interest with financial ties to industry.

Recent funding not listed.

6. Baldassare, Fred. Conflict of interest.

7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations

8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.

9. James Bruckner—financial ties to industry

10. Burnett, David

11. Buscheck, Timothy E

12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: "In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal *Environmental Health Perspectives* about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest."

13. Corrie Clark

14. Cline, Scott Bradley

15. Nancy Pees Coleman ([http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGas NancyColeman-8-7-12.pdf](http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGas%20NancyColeman-8-7-12.pdf))

16. Collins, James W

17. Corra, John—WY political conflict of interest

18. Eric Daniels (Chevron)

19. Thomas Davis, CO School of Mines

20. Joseph deGeorge (Merck)

21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)

22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Ellsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Ellsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’” All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.
27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%202018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%202018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf))
28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”
32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement
33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.

35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All’s Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies’ consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having “**developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters

treated with Fe6+ can be wholly recycled and reused for well site-completion operations.”

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:

epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabbors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Thank you for your time and consideration in this matter,

Gay Dalzell

Subject: Science Advisory Board for Hydraulic Fracturing

Dear Mr. Hanlon,

As I have been researching the practices of the Oil and Gas industry for almost a year, I have recognized some alarming facts. The industry is prone to sway the facts of harm done to the environment and our citizens very much the same as the tobacco industry did with denying cancer and secondhand smoke facts. Therefore, it is my pleasure to recommend the following candidates for the SAB through the USEPA. They are professional scientists, impartial, and display excellent leadership. The others NOT on this list have ties to the Oil and Gas corporations and are not forthcoming with truthful, accurate findings. Sadly, as the scewing of science based findings tied to the Oil&Gas industry has been practiced in the past has led to disastrous results. It is embarrassing for the state of Ohio and shows recklessness, cover ups, and uncaring in the industry. Let's allow the following scientists to protect our citizens and natural world.

Please consider the following outstanding professionals in mind when choosing wisely for the SAB.

Henry Anderson  
Michel Boufadel  
Susan Brantly  
Bruce Brownawell  
Janice Chambers  
David Dzombak  
Robert Edstrom  
Elaine Faustman  
Dr. Madelon Finkel  
Fred Henretig  
Robert Howarth  
Anthony Ingraffea  
Lymen McDonald  
Lisa McKenzie  
Karlis Muhlenbach  
Eileen Murphy  
Dr. Ingrid Padilla  
Jerome Paulson  
Joseph Ryan  
Daniel Schlenk  
Dr. Karen Swackhamer  
Geoffery Thyne  
Jeanne VanBriessen  
Amer Vengosh

Perry Walker  
Paul Westerhoff

These are the leaders our state needs because they are able to do their job accurately.

Thank you.

Valerie Dearing

TO: Mr. Edward Hanlon  
FROM: Patricia and Donald Denny, 7465 Mountain Quail Pl, Painesville OH 44077-9341  
RE: Horizontal Hydraulic Fracturing Science Advisory Board Candidates  
DATE: December 19, 2012

Dear Mr. Hanlon:

Living in Lake County, Ohio, a center of recent and heavy oil and gas leasing in an environmentally pristine area, we write to urge you to appoint to the SAB people who are not connected to the oil and gas industry. Having attended three meetings hosted by leasing agents, we are painfully aware of the industry's unscrupulous methods and high pressure sales tactics. Very little, if anything, is done to fully inform their lease signers about the many immediate and future environmental risks associated with every aspect of the horizontal hydraulic fracturing drilling and extraction process.

The vast majority of leasing is occurring in an area where property owners rely upon private water wells for their water. The local officials have no say over proximity of drilling to water sources like creeks, streams, rivers, and lakes. Some of these are the most pristine in the state of Ohio. In addition to water concerns, there are very significant air pollution concerns that are coming to light from studies done in other states where these kinds of intensely industrialized methods have been in effect. There are also property value concerns about turning people's living environments into industrialized zones which make their neighborhoods unrecognizable.

One of the most despicable aspects of all of this is that the industry in 2004, through their unjust advantages in political venues, managed to strip county and local officials of any ability to zone for this disruptive and dangerous activity. All power rests with the oil and gas companies and their agents, and in the state capitals which have been dominated by those who have been placed into office with the hefty campaign contributions of this industry. Local officials throw up their hands and say they have no control when confused and concerned citizens approach them about all this. Democratic principles had long been abandoned in favor of oil and gas companies.

Looking at the list of candidates for this extremely important panel, we find it very difficult to accept the fact that so many industry-supported persons could have appeared on it. Our experiences with the industry people and with those in state agencies who are supposed to "regulate" the industry definitely have conflicts of interest and should not be considered for the panel. Instead the general public should be served with the appointment of quality candidates who have no former, present, or future ties to the industry.

We concur with the assessments and recommendations made by Heather Cantino of Athens, Ohio. The preferred candidates from the point of view of those who are concerned about the environment are the following 28 people:

Henry Anderson  
Michel Boufadel  
Susan Brantley  
Bruce Brownawell  
Janice Chambers  
David A. Dzombak  
Robert Edstrom  
Elaine M. Faustman  
Dr. Madelon L. Finkel  
Fred M. Henretig  
Robert Howarth  
Anthony Ingraffea  
Lyman McDonald  
Lisa McKenzie  
Karlis Muehlenbach  
Eileen Murphy  
J.P. Nicot  
Dr. Ingrid Padilla  
Jerome Paulson  
Allen Shapiro  
Joseph N. Ryan  
Daniel Schlenk  
Dr. Karen Swackhamer  
Geoffery Thynes  
Jeanne Van Briessen  
Avner Vengosh  
Perry R. Walker  
Paul Westerhoff

Thank you for your kind and diligent attention to this matter of utmost importance for a clean and safe environment.

Patricia and Donald Denny

RE: Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of candidates announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re: public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am a resident of Lenox Township in southern Astabula County, Ohio. My family and I are critical stakeholders of this SAB, since we are homeowners and operate an organic farm. According to the most current geological maps, there are likely to be significant deposits of oil in the Utica formation close by. This means that our community will be impacted by Hydraulic Fracturing over the next few years.

Please consider appointing your committee from the following 26 people. I believe these nominees will ensure that there is a balanced, objective composition of scientific experts on the SAB.

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley

4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and OccupationalHealth Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald- statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and WaterResources Engineering in the Department of Civil Engineering and Surveyingand the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H, Humphrey School of Public Affairs, and Co-Directorof the University's Water Resources Center.
22. Geoffery Thyne

23. Jeanne Van Briessen

24. Avner Vengosh

25. Perry R. Walker

26. Paul Westerhoff

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr.Arthur works completely with and for industry.
4. Stephen Bachu
5. E. Scott Bair - conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner-financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley - Conflict of interest: consults regularly with industry per her cv.
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman
16. Collins, James W
17. Corra, John-WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry.
26. Derek Elsworth
27. James Erb: conflict of interest--consultant to oil and gas industry
28. Fassett, Gordon, HDR Engineering, Inc.
29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."
30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"

32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement
33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by hydraulic fracturing
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI)
45. Michael Nickolaus-not a scientist, works for industry-funded (API among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions LLC.
53. Richard Phillips, Exxon Mobil since 1988
54. Laura Plunkett, Integrative Biostrategies, LLC -industry consultant, conflict of interest.
55. Danny Reible
56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already "better casing standards" as possibly being adequately protective.
57. Bert Smith, Chesapeake
58. Donald Siegel
59. Joseph Patrick Smith, Exxon
60. Richard K Smith, Nabbors Production Company
61. Paul Street, Nalco chemical company
62. Talib Syed - not a scientist. Production engineer, whole career has been in industry.
63. James John Tintera - not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

- 64. Rock Vitale, Environmental Standards, Inc.-not a scientist, works entirely for industry "managing liability". No advanced degree.
- 65. Sanjay Vittale, Shell Oil
- 66. Douglas Wyatt, URS Corporation-conflict of interest
- 67. Victor Ziegler, Occidental Petroleum

Thank you for your attention

Dear Mr. Hanlon,

I am writing to comment on the candidates for the US EPA Science Advisory Panel that will review the technical aspects of the US EPA's report on the effects of shale drilling on ground water.

Essentially I am endorsing the research of candidates offered by Heather Cantino (see attached); in addition, I urge you to ensure that radiation experts be placed on the panel... Joseph Ryan is one... since shale can contain significant levels of radioactivity.

Thank you for ensuring qualified persons who have the best of the public's interest be placed on this panel.

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

**FROM:** Alice Dugar, 6800 Chestnut Rd., Independence OH 44131

Sent December 16, 2012

I strongly endorse the research of Heather Cantino, 33 Cable Lane, Athens OH 45701 and I urge you to follow the recommendations that she has made in the letter written to Mr. Hanlon below:

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

79. Henry Anderson

80. Boufadel, Michel

81. Susan Brantley

82. Brownawell, Bruce
83. Janice Chambers
84. Dzombak, David A.
85. Edstrom, Robert
86. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
87. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
88. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
89. Robert Howarth
90. Anthony Ingraffea
91. Lyman McDonald statistician and biologist
92. Lisa McKenzie
93. Karlis Muehlenbach
94. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
95. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
96. Jerome Paulson
97. Joseph N. Ryan, U. of Colorado, Boulder
98. Daniel Schlenk
99. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H, Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
100. Geoffery Thyne

101. Jeanne Van Briessen

102. Avner Vengosh

103. Perry R. Walker

104. Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be

performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

202. Stephen Almond, MeadWestvaco
203. W. Kenneth Armagost, Andarko Petroleum
204. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://www.examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://www.prnewswire.com), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
205. Stephen Bachu
206. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
207. Baldassare, Fred. Conflict of interest.
208. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
209. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
210. James Bruckner—financial ties to industry
211. Burnett, David

212. Buscheck, Timothy E
213. Gail Charnley – Conflict of interest: consults regularly with industry per her cv.
214. Corrie Clark
215. Cline, Scott Bradley
216. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
217. Collins, James W
218. Corra, John—WY political conflict of interest
219. Eric Daniels (Chevron)
220. Thomas Davis, CO School of Mines
221. Joseph deGeorge (Merck)
222. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
223. Lloyd East (Halliburton)
224. Economides, Michael (consultant; editor-in-chief Energy Tribune)
225. Timothy Ellison (Exxon-Mobil)
226. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
227. Derek Ellsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Ellsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

228. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf))
229. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the

federal representative and chairman of the Red River Compact Commission...”  
(hdrinc.com) Does not have water protection for the public good as a value. Bias  
inappropriate to this SAB.

230. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
231. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
232. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”
233. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement
234. Jester, Stephen, ConocoPhillips
235. George E. King, Apache Corp.
236. Gary Klecka, worked for Dow for most of this career; now an independent consultant
237. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
238. Steven Lewis, Exxon-Mobil for most of his career.
239. Abby Li, most of her career at Monsanto
240. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All’s Not Well)
241. Keith Wilson Lynch
242. Dean Malouta (most of his career with Shell)
243. Steve Mamerow (Pioneer Natural Resources)
244. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
245. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
246. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
247. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
248. Nygaard, KJ, Exxon Mobil
249. Jon Olson funding from oil and gas companies’ consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
250. John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
251. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
252. Thomas Parkerton, Exxon Mobil entire career

253. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having **“developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations.”
254. Richard Phillips, Exxon Mobil since 1988
255. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.
256. Danny Reible
257. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective. ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that “gas as better than coal”  
[lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.
258. Bert Smith, Chesapeake
259. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
260. Joseph Patrick Smith, Exxon
261. Richard K Smith, Nabbors Production Company
262. Paul Street, Nalco chemical company
263. Talib Syed – not a scientist. Production engineer, whole career has been in industry.
264. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
265. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
266. Sanjay Vittale, Shell Oil
267. Douglas Wyatt, URS Corporation—conflict of interest

268. Victor Ziegler, Occidental Petroleum

RE: Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of candidates announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

FROM: Robert Fedyski, Athens OH 45701

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. Following this list is a second list of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions,

community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.

Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:

1. Henry Anderson

1

2. Boufadel, Michel

3. Susan Brantley

4. Brownawell, Bruce

5. Janice Chambers

6. Dzombak, David A.

7. Edstrom, Robert

8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington

9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University

10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist

11. Robert Howarth

12. Anthony Ingraffea

13. Lyman McDonald statistician and biologist

14. Lisa McKenzie

15. Karlis Muehlenbach

16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination

17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez

18. Jerome Paulson

19. Joseph N. Ryan, U. of Colorado, Boulder

20. Daniel Schlenk

2

21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.

22. Geoffery Thyne

23. Jeanne Van Briessen

24. Avner Vengosh

25. Perry R. Walker

26. Paul Westerhoff

The scientific credibility of the EPA is damaged by committees with real or perceived bias

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

3

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," id. App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," id. § 5(b)(2), and does not contain members with inappropriate special interests. Id. § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are

threats to the environment, Mr. Arthur stated, “These (state regulatory agencies) have field inspectors, rules and regulations, if you’re a bad actor, not doing a good job, they’re going to find you. It’s something people are fearful of, but it’s not a reality.” And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report , which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process.". (<http://s.tt/1jbFy>)

4. Stephen Bachu

4

5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.

6. Baldassare, Fred. Conflict of interest.

7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced

water purification device used to remediate wastewater from hydraulic fracturing operations

8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.

9. James Bruckner—financial ties to industry

10. Burnett, David

11. Buscheck, Timothy E

12. Gail Charnley – Conflict of interest: consults regularly with industry per her cv.

13. Corrie Clark

14. Cline, Scott Bradley

15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)

16. Collins, James W

17. Corra, John—WY political conflict of interest

18. Eric Daniels (Chevron)

19. Thomas Davis, CO School of Mines

20. Joseph deGeorge (Merck)

21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)

22. Lloyd East (Halliburton)

23. Economides, Michael (consultant; editor-in-chief Energy Tribune

24. Timothy Ellison (Exxon-Mobil)

25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))

26. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/>

item/1429-visiting-professor-weighs-in-on-fracking: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute no, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

5

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))

28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry

31. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”

32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement

33. Jester, Stephen, ConocoPhillips

34. George E. King, Apache Corp.

35. Gary Klecka, worked for Dow for most of this career; now an independent consultant

36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”

37. Steven Lewis, Exxon-Mobil for most of his career.

38. Abby Li, most of her career at Monsanto

39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.

6

47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."
53. Richard Phillips, Exxon Mobil since 1988
54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant,

conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate: [epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective. ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that “gas as better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:

7

[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Date: 12/19/2012 11:33 PM  
Subject: Hydraulic Fracturing Science Advisory Board Recommendations

Attached please find a letter written on behalf of the grassroots group, Concerned Citizens Ohio, indicating our concern as citizens that the very best, most independent, expert and unbiased scientists form a panel balanced as to expertise on the varied and complicated issues surrounding the entire process (and impacts) known as deep shale horizontal hydraulic fracture extraction of oil and gas. We are living in the beginning of the shale boom and urgently want research done by an unbiased and expert panel, so that our questions can be answered. We have done an extensive review of the existing information and want this panel to be made up of people who are beyond reproach as to their knowledge, their motives, and their methodology.

Sincerely,

Gwen B. Fischer, Ph.D.  
Professor Emerita  
Fulbright Scholar

RE: Federal Register Notice Yo177 Number 162Pages 50505-50506 and list of candidates announced at Yosemite.epa.gov re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

FROM: Concerned Citizens, Ohio

Dear Mr. Hanlon:

I have had discussion with many Concerned Citizens in Ohio who have been investigating multiple issues involved in the complicated industrial process known as deep shale horizontal hydro-fracturing (often loosely called "fracking"). We are engaged citizens who expect our government to work for us and are sharing ideas, knowledge and experience with "fracking." Those of us who have more time have done more investigation in these issues, but please understand that we who have had the time and energy to write are representative of literally hundreds of citizens who have at least an educated layperson's understanding of the risks to the

health and safety of our families and our environment. While some of us have chosen to write

separately and some have chosen to write as small groups, we are none-theless, all very concerned that the work of this important panel not be compromised by conflicts of interest.

I am writing to support the appointment of the following 26 names to the Science Advisory Board (SAB) for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. Following this list is a second list of

those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria

and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability

to be impartial as evidenced in their publications and public speaking. Many in this list also do

not have complete conflict of interest disclosures in their bios.

The Petroleum industry has a loud eno'rg'h 'voice.' It is essential that the citizens who are living with and will live with the health, property, and environmental damage have a voice uncontaminated with any hint of industry bias. Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial

1

process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.

A number of us have carefully reviewed the extensive list of potential candidates for the SAB, looking for candidates whose bios indicate expertise without evident potential bias.

We are citizens who expect scientists appointed by our government agencies to be chosen with an eye to balance the expertise needed for a thorough investigation of the complex processes and long and short-term impacts of the enormously complex industry that is

loosely called "Tracking". We trust that these appointments will minimize even the perception of bias. To the best of our ability, as informed citizens, we have identified the following as meeting those minimal criteria and therefore, we are writing to recommend that the SAB be selected from the following 26 people:

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Deputy of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel, Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth x\*x\*
12. Anthony Ingraffea \*\*\*\*
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie x\*\*x
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayaguez
18. Jerome Paulson
19. Joseph N. Ryan, LT. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen x\*\*\*
24. A. Avner Vengosh xxxx
25. Perry R. Walker
26. Paul Westerhoff

2

Names designated \4/ith \*\*\*x have overall research and expertise, concern for the broader good, and their appointment will lend considerable confidence among the public that the research has been done on behalf of the citizens.

The scientific credibility of the EPA is damaged by committees with real or perceived bias. Given the documented evidence of radium 226 and other radioactivity in produced water and drill cuttings from shale, it is imperative that a radiology expert be included in the panel. I understand that with such a long list of candidates, perhaps it is not possible to add names such as Dr. Marvin Resnikoff, but someone with comparable experience MUST

be on the panel.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and

health concerns are dictated by people who have a financial stake in encouraging EPA to do as

little as possible to regulate their products. Rest assured that our citizens' grassroots groups will

be watching.

Whether scientists who are in the employ of petroleum or related companies are actually biased,

may be less important than that the general public perception is that the SAB will fulfill our expectation that our government is working for us.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed and minimized. Industry bias must be eliminated if possible.

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least

one non-federal employee, which provides collective advice or recommendations to the agency.

5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2),

and does not contain members with inappropriate special interests. *id.* § 5(b)(3).

Committee membership should exclude financially conflicted members, so that committees are

largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a

committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following<sup>67</sup> are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial

as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

We respectfully REJECT the nominations of the following <sup>67</sup> as UNACCEPTABLE candidates, because of potential, clear, or perceived bias:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4 16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Anhur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.ttljbfy>)
4. Stephen Bachu
5. E. Scott Bair - conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner-financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley - Conflict of interest: consults regularly with industry per her cv.
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Cona, John - WY political conflict of interest
18. Eric Daniels (Chevron)
- 4
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Nonnan, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: <http://www.journaladvocate.com/sterling-local-news/ci-22022348/league-women-voters-gets-dirtyhydrofracking>)

26. Derek Elsworth <http://www.science.wa.net.au/topics/industry-a-resources/item/1429-visitingprofessor-weighs-in-on-fracking>: "One of these concerns [with deep-shale drilling and high volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. 'Certainly you're making pathways in the deep strata that didn't previously exist, but those are maybe a couple of kilometres away from your drinking water. You can't say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn't an absolute no, but it's likely you won't develop connections between these because you get intervening beds of low permeability that don't allow transmission.' ...As for abandoned wells causing contamination, he stressed good management. 'Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.'"

These statements indicate the candidate's inability to be unbiased and evaluate scientific data impartially, as these statements have been contradicted by research.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2DI?Vo20JanuaryVo2018/hesentations%o20and7o20Handouts/Brb7o20--Vo20Written%o20Comments7o20beforeVoAAthe%oAAtheVo20OCommittee.pdf)

[LRC/Meetings/2DI?Vo20JanuaryVo2018/hesentations%o20and7o20Handouts/Brb7o20--Vo20Written%o20Comments7o20beforeVoAAthe%oAAtheVo20OCommittee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2DI?Vo20JanuaryVo2018/hesentations%o20and7o20Handouts/Brb7o20--Vo20Written%o20Comments7o20beforeVoAAthe%oAAtheVo20OCommittee.pdf)

28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A "water rights" specialist, who "after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission..." ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry

31. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"

32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement

33. Jester, Stephen, ConocoPhillips

34. George E. King, Apache Corp.

35. Gary Ktecka, worked for Dow for most of this career; now an independent consultant

36. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."

37. Steven Lewis, Exxon-Mobil for most of his career.

38. Abby Li, most of her career at Monsanto

5

39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO

water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)

40. Keith Wilson Lynch

41. Dean Malouta (most of his career with Shell)

42. Steve Mamerow (Pioneer Natural Resources)

43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry

44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.

45. Michael Nickolaus-not a scientist, works for industry-funded (American Petroleum Institute among others) organization.

46. Jean-Philippe Nicofi funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.

47. Nygaard, ex, Exxon Mobil

48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.

49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry."

Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies. Mr. Oneacre is president of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.

50. Thomas Parkerton, Exxon Mobil entire career

51. Deepak Patil, not a scientist, career has worked for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). Perhaps appropriate for the panel to invite testimony from.

52. Richard Phillips, Exxon Mobil since 1988

53. Laura Plunkett, Integrative Biostrategies, LLC -industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate: [epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-ab6T-d199|cc9Zad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-ab6T-d199|cc9Zad)

Her presentations show bias as suggested by financial conflict of interest.

54. Danny Reible

55. James Saiers states he believes intervening rock will/does protect water from contamination

and cites already "better casing standards" as possibly being adequately protective. ([environment.yale.edu/newsarticle/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/newsarticle/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary - The candidate also states that "gas is better than coal" [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjIzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjIzc), revealing lack of either

knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.

56. Bert Smith, Chesapeake

57. Donald Siegel discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:

[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_say\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_say_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives). Again, perhaps might be appropriate for the SAB to invite in for testimony.

58. Joseph Patrick Smith, Exxon

59. Richard K Smith, Nabors Production Company

60. Paul Street, Nalco chemical company

61. Talib Syed - not a scientist. production engineer, whole career has been in industry.

62. James John Tintera - not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

63. Rock Vitale, Environmental Standards, Inc.-not a scientist, works entirely for industry "managing liability". No advanced degree.

64. Sanjay Vittale, Shell Oil

65. Douglas Wyatt, URS Corporation-conflict of interest

66. Victor Ziegler, Occidental Petroleum

This letter of comment was written on behalf of Concerned Citizen Ohio, a grassroots group of

citizens, based largely in Portage County and networked with similar groups across Ohio. A core group of members of CCO have been studying, for several years, all aspects of "fracking"

(technology, financial, as well as the sociological, biological, industrial, endocrine impacts on

the communities where the shale has been most productive). We have about 50 members in Portage County who are fairly active, and between 200-300 "associates" who are concerned enough to be educating themselves, to request information, attend meetings as they are able and

to hope that our government is working for us.

Given the impending holidays when we first learned of the public comment period about SAB,

we have been unable to mobilize all our members, but expect you will hear from some who are

writing as individuals. We have sent this information around to all our different email lists and

we will be sure to eagerly follow the very important work of the panel.

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

**FROM:** Stanley L. Fischer, Hiram, OH 44234

Dear Mr. Hanlon:

Please accept and convey my comments on the nomination of candidates for inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider the following 26 people, who seem to possess clear scientific objectivity and appropriate expertise:**

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist

14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

**Since the scientific credibility of the EPA is damaged by committees with real or perceived bias, please do not consider the remaining names from your long list, whose experience and credentials suggest less than ideal disinterest and objectivity.**

Given the links of deep shale drilling and high pressure horizontal hydraulic fracturing to water contamination, air pollution, increased emissions, various illnesses, and community disruption, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest. Since industry-supported scientists and scientists directly employed by the gas industry, may tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption, it is in my view, imperative to determine that appointees are free from industry influences

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a

strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect the objectivity, integrity, independence, and competence required to carry out its important duty.

Thank you for your work and for your kind attention,  
Stanley L. Fischer  
Hiram, OH 44234

**RE:** public comment period on announced list for Hydraulic Fracturing Science Advisory  
Board panel

Mr. Hanlon:

I am submitting the following 28 names for consideration to the Science Advisory Board  
panel for the USEPA Hydraulic Fracturing study. These nominations provide scientific  
expertise, knowledge, experience and the ability to be impartial.

105. Henry Anderson

106. Michel Boufadel

107. Susan Brantley

108. Bruce Brownawell
109. Janice Chambers
110. David A. Dzombak
111. Robert Edstrom
112. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
113. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
114. Fred M. Henretig, University of Pennsylvania, pediatric toxicologist
115. Robert Howarth
116. Anthony Ingraffea
117. Lyman McDonald, statistician and biologist
118. Lisa McKenzie
119. Karlis Muehlenbach
120. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
121. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
122. Jerome Paulson
123. Joseph N. Ryan, University of Colorado, Boulder
124. Daniel Schlenk
125. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
126. Geoffery Thyne

127. Jeanne Van Briessen

128. Avner Vengosh

129. Perry R. Walker

130. Paul Westerhoff

27. Allen Shapiro

28. JP Nicot

Also, I would request that additional radiation experts be included on this panel, given that shale can contain high levels of radioactivity.

I am requesting that the following 67 names **not be considered** for inclusion on the Science Advisory Board for the USEPA Hydraulic Fracturing study due to direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

269. Stephen Almond, MeadWestvaco

270. W. Kenneth Armagost, Andarko Petroleum

271. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://www.examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://www.prnewswire.com), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)

272. Stephen Bachu

273. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.

274. Baldassare, Fred. Conflict of interest.

275. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
276. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
277. James Bruckner—financial ties to industry
278. Burnett, David
279. Buscheck, Timothy E
280. Gail Charnley – Conflict of interest: consults regularly with industry per her cv.
281. Corrie Clark
282. Cline, Scott Bradley
283. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
284. Collins, James W
285. Corra, John—WY political conflict of interest
286. Eric Daniels (Chevron)
287. Thomas Davis, CO School of Mines
288. Joseph deGeorge (Merck)
289. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
290. Lloyd East (Halliburton)
291. Economides, Michael (consultant; editor-in-chief Energy Tribune
292. Timothy Ellison (Exxon-Mobil)
293. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
294. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”  
All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

295. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf))
296. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” (hdrinc.com) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
297. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
298. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
299. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”
300. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement
301. Jester, Stephen, ConocoPhillips
302. George E. King, Apache Corp.
303. Gary Klecka, worked for Dow for most of this career; now an independent consultant
304. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
305. Steven Lewis, Exxon-Mobil for most of his career.
306. Abby Li, most of her career at Monsanto
307. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All’s Not Well)
308. Keith Wilson Lynch
309. Dean Malouta (most of his career with Shell)
310. Steve Mamerow (Pioneer Natural Resources)
311. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
312. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
313. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
314. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
315. Nygaard, KJ, Exxon Mobil
316. Jon Olson funding from oil and gas companies’ consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
317. John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.

318. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
319. Thomas Parkerton, Exxon Mobil entire career
320. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having **“developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations.”
321. Richard Phillips, Exxon Mobil since 1988
322. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.
323. Danny Reible
324. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective. ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that “gas as better than coal”  
[lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.
325. Bert Smith, Chesapeake
326. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrac.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrac.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
327. Joseph Patrick Smith, Exxon
328. Richard K Smith, Nabors Production Company
329. Paul Street, Nalco chemical company
330. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

- 331. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
- 332. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
- 333. Sanjay Vittale, Shell Oil
- 334. Douglas Wyatt, URS Corporation—conflict of interest
- 335. Victor Ziegler, Occidental Petroleum

I respectfully remind USEPA of its professional and legal duty to select candidates who adequately represent the protection of public health and the environment, consistent with the mission of EPA. It is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest. The scientific credibility of the EPA is damaged by committees with real or perceived bias.

Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. The Science Advisory Board should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset.

Thank you for your consideration,  
Sherry Fleming  
Bryan, OH 43506

Subject: USEPA Hydraulic Fracturing Study

December 17, 2012

TO: Ed Hanlon  
Designated Federal Officer  
EPA Science Advisory Board Staff Office

Dear Mr. Hanlon:

I am writing you as a member of the medical community and as a concerned citizen that cares about the risk of hydraulic fracturing. I am asking you to support the appointment of the following 27 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 27 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. Following this list is a second list of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.

Please consider appointing your committee from the following 27 people, those who clearly show evidence of scientific objectivity and appropriate expertise:

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.

7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

27. Mr. James Northrup

The scientific credibility of the EPA is damaged by committees with real or perceived bias

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be

impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**I feel the following you should REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article (examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley – Conflict of interest: consults regularly with industry per her cv.
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemoc.us/docs/2012/presentations/Tue-PM-ShaleGas> NancyColeman-8-7-12.pdf)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)

24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:  
[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometers away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute no, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf))
28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”
32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement
33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto

39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flow back waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."
53. Richard Phillips, Exxon Mobil since 1988
54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate: [epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.
55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective. ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that “gas as better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:

[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

IPAA EPA HF Study Panelist Selection Letter 12-18-2012.pdf

Mr. Hanlon,

Please find attached IPAA's recommendations regarding candidates for the Science Advisory Board Hydraulic Fracturing Advisory Panel. As I understand the process, it should be submitted to you. If that is not correct, please let me know the appropriate submission process.

Thank you,

Lee Fuller

**From:** Hanlon.Edward@epamail.epa.gov [<mailto:Hanlon.Edward@epamail.epa.gov>]

**To:** Lee Fuller  
**Subject:** list of candidates posted last night for EPA SAB HF advisory panel

hello Mr. Fuller,

FYI, the list of candidates for EPA SAB's HF advisory panel was posted last night on our SAB HF Advisory Panel website, at  
<http://yosemite.epa.gov/sab/sabproduct.nsf/WebProjectsRequestsforCommentsBOARD/B436304BA804E3F885257A5B00521B3B?OpenDocument&TableRow=2.1#2>.

We request public comments by December 19th.

Here's a PDF version of the document....Thanks, Ed H

Re: Candidates for the EPA Science Advisory Board Hydraulic Fracturing Advisory Panel

Dear Mr. Hanlon,

These recommendations are submitted by the Independent Petroleum Association of America (IPAA). IPAA represents the thousands of independent producers and supporting industries that develop 95 percent of US oil and natural gas wells and produce over 50 percent of US oil and more than 80 percent of US natural gas.

IPAA believes that the selection of a Science Advisory Board (SAB) Hydraulic Fracturing Advisory Panel can be an important aspect of improving the Environmental Protection Agency (EPA) hydraulic fracturing study. However, to achieve a useful advisory panel, it is essential to appoint a balanced membership. The SAB panel that developed the hydraulic fracturing study design failed to meet this test and created a product that has resulted in confusion over the scope of the study, ongoing questions about the quality of the testing and serious doubts about its research targeting. Recently, EPA has impaneled a series of roundtables to assess technical issues associated with hydraulic fracturing and the study. EPA wisely chose to create a balance in these roundtables, assuring that expertise from the industry that produces oil and natural gas and fractures wells is present.

IPAA believes that the SAB Hydraulic Fracturing Advisory Panel needs to include the expertise of industry participants. Numerous nominees for the panel have been included in list of candidates. IPAA believes that one-third of the panel should be comprised of candidates coming from industry or with extensive industrial experience. This balance would greatly improve the pragmatism of the panel as it reviews study results and advises the Administrator.

Conversely, IPAA believes that EPA must exclude the candidates who have shown by their public actions an inherent bias against the use of hydraulic fracturing and the development of America's oil and natural gas resources. Attached to this submission is a list of candidates that IPAA believes should be excluded from the panel.

Sincerely,

Lee O. Fuller  
Vice President, Government Relations  
Attachment

## ATTACHMENT

Following are a number of individuals listed as possible candidates for the EPA SAB Hydraulic Fracturing Advisory Panel that IPAA believes should be excluded based on their public opposition to hydraulic fracturing or to the development of American oil and natural gas.

**MICHEL BOUFADEL, Ph.D.:** Dr. Boufadel has previously suggested that the EPA's hydraulic fracturing study, which already has an expansive scope, "does not go far enough." Boufadel has also been described as an individual on a "campaign" to alert lawmakers in Philadelphia about the "dangers of shale drilling." Under his leadership at Temple University, the Department of Civil and Environmental Engineering has hosted organizations and individuals (Page 2: Earthworks, Clean Air Council) that actively lobby for bans on natural gas development. One of his guests was Calvin Tillman, who is engaged in an advocacy tour against natural gas. Boufadel also serves as an advisor to the group "Physicians, Scientists and Engineers for Healthy Energy" (PSE), which is funded by the Park Foundation, an organization that wants to ban hydraulic fracturing. PSE misleadingly labels itself as a disinterested, science-based organization, but media accounts have noted "language on the group's website suggests an anti-development viewpoint."

**ROBERT HOWARTH, Ph.D.:** Dr. Howarth is the lead author of a widely discredited paper on lifecycle methane emissions from oil and gas development. The professor's research has been criticized by agencies of the federal government (DOE/NETL) and multiple peer-reviewed papers, including a recent Massachusetts Institute of Technology (MIT) study coauthored by a lead author of the "IPCC Fifth Assessment Report." The MIT study noted that Howarth used "unreasonable" assumptions on methane leakage rates to arrive at his conclusions. Former PA DEP commissioner John Hanger noted the Howarth/Ingraffea study was promoted using funds from the Park Foundation, an organization that opposes the oil and gas industry, and is open about financing research that advances this cause. Earlier this year, Howarth was featured in a widely distributed video for a 501 (C) (3) organization where he stated natural gas operators surreptitiously "vent" large volumes of methane because they're fearful that alternate means of maintaining safe pressure, such as flaring, would "disturb people."

**ANTHONY INGRAFFEA, Ph.D.:** Dr. Ingraffea is a co-author of a widely discredited study on lifecycle methane emissions from oil and gas development. The professor's research and its findings have been criticized by agencies of the federal government (DOE/NETL) and multiple peer-reviewed papers, including a recent Massachusetts Institute of Technology (MIT) study coauthored by a lead author of the "IPCC Fifth Assessment Report" who noted the study used "unreasonable" assumptions on methane leakage rates to arrive at its conclusions. Former PA DEP Commissioner John Hanger noted the Howarth/Ingraffea study was promoted using funds from the Park Foundation, an organization that opposes the oil and gas industry and is open about financing research that advances this cause. Dr. Ingraffea has shown an increasing willingness to make statements refuted by experience and independent scientific review. During a June 2012 congressional briefing, Ingraffea claimed "hundreds if not thousands of cases of water contamination, anywhere shale gas development occurs." Ingraffea has also stated the natural gas industry is producing "pseudoscience" in an attempt to "kill science." Ingraffea helped create, and serves on the board of directors for, the group "Physicians, Scientists and Engineers for Healthy Energy" (PSE), which is funded by the Park Foundation, an organization that wants to ban hydraulic fracturing. PSE misleadingly labels itself as a disinterested, science-

based organization, but media accounts have noted “language on the group's website suggests an anti-development viewpoint.” In addition, when questioned if universities should foster additional research on hydraulic fracturing Dr. Ingraffea stated; “...excuse me, I thought the industry said there are no problems, so why do we need solutions to problems that don't exist. Why do we need more research? I think the research has already been done and the research has spoken.”

LISA MCKENZIE, Ph.D.: Dr. McKensie is a co-author of a controversial health impact study of natural gas operations which determined that natural gas development may cause future health impacts for those living within a defined proximity to natural gas wells. The study was a hypothetical modeling exercise that did not provide any evidence of actual health problems. It received strong criticism from the Colorado Department of Health, was disavowed by public health officials in Garfield County and relied on flawed assumptions that exaggerated emissions associated with drilling and completing new gas wells. The CSPH researchers claimed to have been working closely with Garfield County officials, but the county's chief environmental health official, Jim Rada, told the press he had “no knowledge” of what the researchers were even studying.

KARLIS MUEHLENBACHS, Ph.D.: Dr. Muehlenbachs is a professor at the University of Alberta. Last November, he made news in Canada for delivering a presentation that attempted to “prove” groundwater contamination from shale wells in Quebec. The press ran with his findings, with one headline in La Presse reading “First Case of Water Contamination from Fracking.” Muehlenbachs, however, assumed his water sample was groundwater, when in fact it was taken from a cellar. Subsequent news reporting corrected his error, but he initially refused to concede the error. On slide 18 of the above mentioned presentation, Muehlenbachs has a chart that describes “gas in water,” suggesting methane has seeped into groundwater. But in a quiet update – and admission of his earlier error – Muehlenbachs has a new version of the presentation that admits, “Analysis are of gas from standing water in the well cellar. No data related to ground water at this well.” Later in that updated presentation he reaffirms that the sample was “Not from the Aquifer.” Muehlenbachs has not come out and apologized for the damage he caused to the industry's reputation for his oversight, even though a simple comparison of the “same” presentation shows significant changes. In December 2011, Muehlenbachs asserted: “The biggest problem is that half or more the [shale] wells drilled leak due to improper cement jobs or industry is not following best practices.” This is based on a nearly decade-old pamphlet from Schlumberger, which examined “sustained casing pressure” (SCP) – in offshore wells in the Gulf of Mexico. SCP does not indicate a leak, but rather merely the presence of pressure, as the name implies, and in any event the statistic used has no bearing on the development of onshore shale wells.

DEBORAH SWACKHAMER, Ph.D.: During a presentation to the Institute of Medicine of the National Academies, the only study Dr. Swackhamer cited was a paper by Theo Colborn and the organization she runs, The Endocrine Disruption Exchange, or TEDX. This is disturbing because TEDX is openly hostile to the oil and gas industry and accepts funding from other groups that oppose hydraulic fracturing. Based on the conclusions of the TEDX paper, Swackhamer said during her presentation that fracturing fluids can cause “tremendous health problems” and pose a “grave concern.” She also described the current disclosure framework for hydraulic fracturing as a “black box.”

GEOFFREY THYNE, Ph.D.: Dr. Thyne has claimed that he was forced out of research positions at the Colorado School of Mines and the University of Wyoming due to pressure from the oil and

gas industry. He has also collaborated with Earthworks and the Checks and Balances Project, which are groups that oppose the oil and gas industry.

JEANNE VANBRIESEN, Ph.D.: Dr. VanBriesen co-wrote a paper with the Natural Resources Defense Council titled “In Fracking’s Wake: New Rules are Needed to Protect Our Health and Environment from Contaminated Wastewater.” The report calls for a major increase in federal regulation of the oil and gas industry, including this recommendation: “Congress should eliminate the Safe Drinking Water Act exemption for hydraulic fracturing to ensure that injection of fracturing fluid will not endanger drinking water sources.”

AVNER VENGOSH, Ph.D.: Dr. Vengosh is the co-author of two controversial papers which have insinuated that hydraulic fracturing is responsible for methane contamination of water wells, and that hydraulic fracturing fluids could migrate upwards through thousands of feet and billions of tons of rock into drinking water aquifers. Vengosh’s work at Duke University has been funded by the Park Foundation, which opposes the oil and gas industry and is open about financing research that advances this cause. Vengosh himself has been outspoken about hydraulic fracturing in the news media. For example, he published an op-ed in the Philadelphia Inquirer – titled “DEP: Protecting water or gas?” – that was critical of the Pennsylvania Department of Environmental Protection. And in a SmartPlanet news story titled “Scientist: Gas industry is withholding hydro-fracking contamination data,” Vengosh provided the following quote: “Given that the regulations are so different between the states and that our study reveals that our understanding on the environmental impacts is limited, yes EPA should be actively involved in regulating hydrofracking operations and practices.”

PERRY WALKER, Ph.D.: One of Dr. Walker’s funders is the Wyoming Outdoor Council, which advocates for increasing the regulatory burden on the oil and gas industry. Specifically, the WOC wants federal law changed to regulate “all injections of hydraulic fracturing fluids under the Safe Drinking Water Act.” Dan Heilig, the former head of the WOC, has described Walker as “the ideal citizen activist.”

MARK WILLIAMS, Ph.D.: Dr. Williams has given a presentation called “Save Our Snow: Climate Change, Fracking, Ski Areas, and Water Security in Colorado and the West” a number of times at venues across Colorado. According to a summary of the presentation, Williams classifies hydraulic fracturing as a threat to Colorado’s water security. This is completely at odds with the findings of three state agencies, which recently concluded hydraulic fracturing accounts for less than 0.1 percent of water use in Colorado.

LAUREN ZEISE, Ph.D.: In addition to her role at the California Environmental Protection Agency, Dr. Zeise has also published papers in a number of journals. She was the co-author of a paper which calls for “rethinking current approaches to reducing environmental risks” by “changing the burden of proof so that chemicals are not presumed safe in the absence of scientific data.”

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Following are my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

- Henry Anderson

- Boufadel, Michel
- Susan Brantley
- Brownawell, Bruce
- Janice Chambers
- Dzombak, David A.
- Edstrom, Robert
- Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
- Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
- Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
- Robert Howarth
- Anthony Ingraffea
- Lyman McDonald statistician and biologist
- Lisa McKenzie
- Karlis Muehlenbach
- Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
- Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
- Jerome Paulson
- Joseph N. Ryan, U. of Colorado, Boulder
- Daniel Schlenk
- Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
- Geoffery Thyne
- Jeanne Van Briessen
- Avner Vengosh
- Perry R. Walker
- Paul Westerhoff

**Please REJECT the nominations of the following candidates due to conflict of interest, lack of appropriate educational background, or bias:**

- Stephen Almond, MeadWestvaco
- W. Kenneth Armagost, Andarko Petroleum
- Dan Arthur: ALL Consulting.
- Stephen Bachu
- E. Scott Bair

- Baldassare, Fred.
- Terence Barry, Aquamost
- Bratton, Thomas R., Schlumberger Technology
- James Bruckner
- Burnett, David
- Buscheck, Timothy E
- Gail Charnley
- Corrie Clark
- Cline, Scott Bradley
- Nancy Pees Coleman
- Collins, James W
- Corra, John
- Eric Daniels
- Thomas Davis, CO School of Mines
- Joseph deGeorge
- Dunn-Norman, Shari
- Lloyd East
- Economides, Michael
- Timothy Ellison
- Stuart Ellsworth
- Derek Elsworth
- James Erb
- Fassett, Gordon, HDR Engineering, Inc. – not a scientist
- Fontana, John V., Vista GeoScience LLC – not a scientist
- Hayes, Thomas D., Gas Technology Institute E&P Center
- Hufford, Walter R., Talisman Energy USA
- Ron Hyden, Director of Technology for Halliburton's Production Enhancement
- Jester, Stephen, ConocoPhillips
- George E. King, Apache Corp.
- Gary Klecka
- Philip Leber
- Steven Lewis
- Abby Li
- Sean Lieske,
- Keith Wilson Lynch
- Dean Malouta
- Steve Mamerow
- Carl T. Montgomery, NSI Technologies
- Daniel Moos, Baker Hughes
- Michael Nickolaus – not a scientist
- Jean-Philippe Nicot
- Nygaard, KJ, Exxon Mobil
- Jon Olson
- John Oneacre, Ground Water Solutions
- Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS)
- Thomas Parkerton, Exxon Mobil
- Deepak Patil – not a scientist

- Richard Phillips, Exxon Mobil
- Laura Plunkett, Integrative Biostrategies, LLC
- Danny Reible
- James Saiers
- Bert Smith, Chesapeake
- Donald Siegel
- Joseph Patrick Smith, Exxon
- Richard K Smith, Nabbors Production Company
- Paul Street, Nalco
- Talib Syed – not a scientist
- James John Tintera – not a scientist
- Rock Vitale, Environmental Standards, Inc.—not a scientist
- Sanjay Vittale, Shell Oil
- Douglas Wyatt, URS Corporation
- Victor Ziegler, Occidental Petroleum

Thank you for the opportunity to comment.

RE: Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of candidates announced at Yosemite.epa.gov re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. Following this list is a second list of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.

Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.

7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

The scientific credibility of the EPA is damaged by committees with real or perceived bias

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are

appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: "In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal Environmental Health Perspectives about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest."

13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Ellsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Ellsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute no, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf))
28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."
30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"
32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement
33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant,

disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations.”

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate: [epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:

[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Thank you for your attention,

Peter Gibbons-Ballew

But if you teach me to organize, then, no matter the challenge, I can join my community and we can make our own solution. ~ from Creating a Culture of Peace

Comments On SAB Panel Short List.doc

December 19, 2012

**TO:** Edward Hanlon  
Designated Federal Officer  
EPA Science Advisory Board Staff Office  
[hanlon.edward@epa.gov](mailto:hanlon.edward@epa.gov)

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

**FROM:** Mary Sue Gmeiner, 811 Bellows Dr., New Carlisle, OH 45344

Dear Mr. Hanlon:

I am very concerned about the need for strong scientific data, open minds, and lack of conflicts of interest as criteria to be used in consideration of the Scientific Advisory Board on hydraulic fracturing. I wish to support the nomination of the following five candidates for the Science Advisory Board on Hydraulic Fracturing.

1. Avner Vengosh
2. Jeane VanBriesen

3. Allen Shapiro
4. Lisa McKenzie
5. Anthony Ingraffea

Per USEPA guidelines and criteria, I support these candidates based on their scientific expertise, knowledge, experience and ability to be impartial. Additionally, there are 22 names of other well qualified persons. Please consider these candidates:

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel, Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Lyman McDonald statistician and biologist
13. Karlis Muehlenbach
14. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
15. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
16. Jerome Paulson
17. Joseph N. Ryan, U. of Colorado, Boulder
18. Daniel Schlenk
19. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
20. Geoffery Thyne
21. Perry R. Walker
22. Paul Westerhoff

I also have a list of candidates who should be rejected, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:

336. Stephen Almond, MeadWestvaco
337. W. Kenneth Armagost, Andarko Petroleum
338. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://prnewswire.com), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
339. Stephen Bachu
340. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
341. Baldassare, Fred. Conflict of interest.
342. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
343. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
344. James Bruckner—financial ties to industry
345. Burnett, David
346. Buscheck, Timothy E
347. Gail Charnley – Conflict of interest: consults regularly with industry per her cv.
348. Corrie Clark
349. Cline, Scott Bradley
350. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
351. Collins, James W
352. Corra, John—WY political conflict of interest
353. Eric Daniels (Chevron)
354. Thomas Davis, CO School of Mines
355. Joseph deGeorge (Merck)
356. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
357. Lloyd East (Halliburton)
358. Economides, Michael (consultant; editor-in-chief Energy Tribune)
359. Timothy Ellison (Exxon-Mobil)

360. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
361. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

362. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012 January 18/Presentations and Handouts/Erb Written Comments before the Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20Written%20Comments%20before%20the%20Committee.pdf))
363. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
364. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
365. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
366. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”
367. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement
368. Jester, Stephen, ConocoPhillips
369. George E. King, Apache Corp.
370. Gary Klecka, worked for Dow for most of this career; now an independent consultant
371. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
372. Steven Lewis, Exxon-Mobil for most of his career.
373. Abby Li, most of her career at Monsanto

374. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
375. Keith Wilson Lynch
376. Dean Malouta (most of his career with Shell)
377. Steve Mamerow (Pioneer Natural Resources)
378. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
379. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting.
380. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
381. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
382. Nygaard, KJ, Exxon Mobil
383. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
384. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
385. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
386. Thomas Parkerton, Exxon Mobil entire career
387. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having **"developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."
388. Richard Phillips, Exxon Mobil since 1988
389. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.

- 390. Danny Reible
- 391. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective. ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary.
- 392. Bert Smith, Chesapeake
- 393. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
- 394. Joseph Patrick Smith, Exxon
- 395. Richard K Smith, Nabbors Production Company
- 396. Paul Street, Nalco chemical company
- 397. Talib Syed – not a scientist. Production engineer, whole career has been in industry.
- 398. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
- 399. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
- 400. Sanjay Vittale, Shell Oil
- 401. Douglas Wyatt, URS Corporation—conflict of interest
- 402. Victor Ziegler, Occidental Petroleum

I am sure you understand that candidates with a financial interest in the outcome of the affairs of the committee should be excluded, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues, without bias.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

Thank you for your attention,  
Mary Sue Gmeiner  
New Carlisle, OH 45344

Subject: USEPA SAB

December 17, 2013

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

I spoke with you last Wednesday concerning appointments to the ad hoc panel to the SAB. Of grave concern to me is the issue you mentioned about congressional members asking for more industry appointments. I have been involved with people around the state of Ohio whose concerns for our health and safety must, I repeat MUST hold more weight than the idea that congress might influence the USEPA with phone calls to you about the number of jobs they will get credit for!

The emotional burden of the effects of fracking and injection wells that is weighing on our citizens is causing a serious long term problem. I am one of many that is asking for the USEPA to bring the research and analysis of the experts that are identified in this letter to be involved in the USEPA study.

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. Following this list is a second list of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and

carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.

Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson

19. Joseph N. Ryan, U. of Colorado, Boulder

20. Daniel Schlenk

21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.

22. Geoffery Thyne

23. Jeanne Van Briessen

24. Avner Vengosh

25. Perry R. Walker

26. Paul Westerhoff

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article (examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: "In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal Environmental Health Perspectives about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a

conflict of interest.”

13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Ellsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Ellsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute no, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012 January 18/Presentations and Handouts/Erb -- Written Comments before the the Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20Committee.pdf))
28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."
30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"
32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement
33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber "For 20 years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6 ). In a single dose, Fe6 can simultaneously perform as an oxidant, coagulant, anti-foulant,

disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6 has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6 can be wholly recycled and reused for well site-completion operations.”

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate: [epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:

[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabbors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Thank you for your attention.

Respectfully submitted,

Roxanne Groff

RE: Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of candidates announced at Yosemite.epa.gov re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. Following this list is a second list of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Given the record of deep shale drilling and high pressure horizontal

hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.

Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking

water contamination

17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez

18. Jerome Paulson

19. Joseph N. Ryan, U. of Colorado, Boulder

20. Daniel Schlenk

21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.

22. Geoffery Thyne

23. Jeanne Van Briessen

24. Avner Vengosh

25. Perry R. Walker

26. Paul Westerhoff

The scientific credibility of the EPA is damaged by committees with real or perceived bias

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for

industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," id. App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," id. § 5(b)(2), and does not contain members with inappropriate special interests. Id. § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do

not have complete conflict of interest disclosures in their bios.

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: "In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal Environmental Health Perspectives about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a

disclosure after Charnley and her colleague disputed having a conflict of interest.”

13. Corrie Clark

14. Cline, Scott Bradley

15. Nancy Pees Coleman

(<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)

16. Collins, James W

17. Corra, John—WY political conflict of interest

18. Eric Daniels (Chevron)

19. Thomas Davis, CO School of Mines

20. Joseph deGeorge (Merck)

21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)

22. Lloyd East (Halliburton)

23. Economides, Michael (consultant; editor-in-chief Energy Tribune)

24. Timothy Ellison (Exxon-Mobil)

25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))

26. Derek Elsworth

<http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>:

“One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute no, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability

to be protective of water and human health for future generations as USEPA's mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation:

[ncleg.net/documents/sites/committees/EPI-](http://ncleg.net/documents/sites/committees/EPI-)

[LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf))

28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, “entire career has been in the private service and consulting industry.”

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry

31. Hufford, Walter R., Talisman Energy USA 30 years' experience in “energy industry”

32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement

33. Jester, Stephen, ConocoPhillips

34. George E. King, Apache Corp.

35. Gary Klecka, worked for Dow for most of this career; now an independent consultant

36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”

37. Steven Lewis, Exxon-Mobil for most of his career.

38. Abby Li, most of her career at Monsanto

39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)

40. Keith Wilson Lynch

41. Dean Malouta (most of his career with Shell)

42. Steve Mamerow (Pioneer Natural Resources)

43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry

44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.

45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.

46. Jean-Philippe Nicot: funding not disclosed, extensive historic

ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.

47. Nygaard, KJ, Exxon Mobil

48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.

49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.

50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.

51. Thomas Parkerton, Exxon Mobil entire career

52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate: [epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already "better casing standards" as possibly being adequately protective

([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that

“gas is better than coal”

[lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc),

revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:

[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Thank you for your time and close attention in this critical matter – so many people are currently affected by horizontal drilling, and so many more will be in the future. The time is now to think deeply and objectively about how to pursue this source of energy in a way that doesn't cost more to the community than they get out of it.

Trish Harness

Garrettsville, OH, 44231

From: "Johnson, Badger"  
To: Edward Hanlon/DC/USEPA/US@EPA  
Date: 12/19/2012 11:40 AM  
Subject: RE: Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of candidates announced at Yosemite.epa.gov re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Hi Mr. Hanlon,

These are my comments on the nomination of candidates for inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study, and to reject 67 other nominations.

Basically, I want to see people who will speak up when they see the possibility of groundwater contamination, which means NOT filling the Board with a bunch of industry hacks. These people don't have to be anti-fracking activists, but they need to joyfully acknowledge all the risks of the process and bring industry to heel when they try to step out of line.

Per USEPA guidelines and criteria, I will support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. Following this list is a second list of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.

Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.

7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

The scientific credibility of the EPA is damaged by committees with real or perceived bias. Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the

EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," id. App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," id. § 5(b)(2), and does not contain members with inappropriate special interests. Id. § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article (examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process.". (<http://s.tt/1jbFy>)

4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley – Conflict of interest: consults regularly with industry per her cv.
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman  
([http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGas NancyColeman-8-7-12.pdf](http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGas%20NancyColeman-8-7-12.pdf))
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:  
[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute no, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf))
28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”
32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement
33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All’s Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies’ consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste

industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.

51. Thomas Parkerton, Exxon Mobil entire career

52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having “developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations.”

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate: [epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective. ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that “gas as better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabbors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest
67. Victor Ziegler, Occidental Petroleum

Love and Solidarity!

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

**Dear Mr. Hanlon:**

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is**

**essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

1. Henry Anderson
1. Boufadel, Michel
1. Susan Brantley
1. Brownawell, Bruce
1. Janice Chambers
1. Dzombak, David A.
1. Edstrom, Robert
1. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
1. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
1. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
1. Robert Howarth
1. Anthony Ingraffea
1. Lyman McDonald statistician and biologist
1. Lisa McKenzie
1. Karlis Muehlenbach
1. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
1. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez

1. Jerome Paulson
1. Joseph N. Ryan, U. of Colorado, Boulder
1. Daniel Schlenk
1. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
1. Geoffery Thyne
1. Jeanne Van Briessen
1. Avner Vengosh
1. Perry R. Walker
1. Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and

competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://PRNewswire), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and

continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process.". (<http://s.tt/1jbFy>)

4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: “In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal *Environmental Health Perspectives* about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest.”
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Ellsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Ellsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you

develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn't an absolute *no*, but it's likely you won't develop connections between these because you get intervening beds of low permeability that don't allow transmission.' ...As for abandoned wells causing contamination, he stressed good management. 'Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.'"

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate's inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last "hundreds of years" is another indication of the candidate's lack of inclination to evaluate this technology's ability to be protective of water and human health for future generations as USEPA's mandate requires.

1. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))
2. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A "water rights" specialist, who "after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission..." ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
3. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."
4. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
5. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"
6. Ron Hyden, Director of Technology for Halliburton's Production Enhancement
7. Jester, Stephen, ConocoPhillips
8. George E. King, Apache Corp.
9. Gary Klecka, worked for Dow for most of this career; now an independent consultant
10. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."
11. Steven Lewis, Exxon-Mobil for most of his career.
12. Abby Li, most of her career at Monsanto
13. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
14. Keith Wilson Lynch
15. Dean Malouta (most of his career with Shell)
16. Steve Mamerow (Pioneer Natural Resources)
17. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry

18. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
19. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
20. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
21. Nygaard, KJ, Exxon Mobil
22. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
23. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
24. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
25. Thomas Parkerton, Exxon Mobil entire career
26. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having **"developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."
27. Richard Phillips, Exxon Mobil since 1988
28. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

1. Danny Reible
2. James Saiers states he believes intervening rock will/does protect water from contamination and cites already "better casing standards" as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the

existing substantive evidence to the contrary. The candidate also states that “gas is better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.

3. Bert Smith, Chesapeake
4. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
5. Joseph Patrick Smith, Exxon
6. Richard K Smith, Nabbors Production Company
7. Paul Street, Nalco chemical company
8. Talib Syed – not a scientist. Production engineer, whole career has been in industry.
9. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
10. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
11. Sanjay Vittale, Shell Oil
12. Douglas Wyatt, URS Corporation—conflict of interest
13. Victor Ziegler, Occidental Petroleum

RE: Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of  
candidates announced at Yosemite.epa.gov re public comment period on announced list  
for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates  
for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the  
USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific  
expertise, knowledge, experience and ability to be impartial. *Following this list* is a  
*second list* of those whose appointment I strongly oppose and urge USEPA to reject,  
based on USEPA criteria and either their direct conflicts of interest, lack of scientific  
expertise, and/or clear lack of ability to be impartial as evidenced in their publications  
and public speaking. Many in this list also do not have complete conflict of interest  
disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic  
fracturing to result in water contamination, air pollution, increased ghg emissions,  
community disruption, illnesses, and deaths of humans and animals, and the  
overwhelming environmental and carbon footprints of this industrial process, it is  
essential that federal regulatory efforts be painstakingly clear of industry bias and  
conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who  
clearly show evidence of scientific objectivity and appropriate expertise:**

1. Henry Anderson

2. Boufadel, Michel

3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy. of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel, Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the

Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.

22. Geoffery Thyne

23. Jeanne Van Briessen

24. Avner Vengosh

25. Perry R. Walker

26. Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://www.examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from *PR Newswire*, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not

listed.

6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: "In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal *Environmental Health Perspectives* about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest."
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gcts-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gcts-dirt-hydrofracking))
26. Derek Ellsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: "One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Ellsworth regarded as doubtful. 'Certainly you're making pathways in the deep strata that didn't previously exist, but those are maybe a couple of kilometres away from your drinking water. You can't say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn't an absolute *no*, but it's likely you won't develop connections between these because you get intervening beds of low permeability that don't allow transmission.' ...As for abandoned wells causing

contamination, he stressed good management. 'Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.'"

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate's inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last "hundreds of years" is another indication of the candidate's lack of inclination to evaluate this technology's ability to be protective of water and human health for future generations as USEPA's mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))
28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A "water rights" specialist, who "after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission..." ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."
30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"
32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement
33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services. integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.

45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having **"developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."
53. Richard Phillips, Exxon Mobil since 1988
54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.
55. Danny Reible
56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already "better casing standards" as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that "gas is better than coal" [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPilzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPilzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions

increasingly suggests otherwise.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabbors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Very Truly,

Ani Karetka

EPA yes and no lists for SAB.docx

December 16, 2012

**TO:** Ed Hanlon  
Designated Federal Officer  
EPA Science Advisory Board Staff Office  
[hanlon.edward@epa.gov](mailto:hanlon.edward@epa.gov)

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of candidates announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:  
The following are my comments on the nomination of candidates for possible inclusion

on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

With regard to USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. In what follows is a second list of those whose appointment I strongly *oppose and urge USEPA to reject*, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

It is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest. **Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez

18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

Given the potential for water contamination and the inevitable accompaniment of air pollution, increased GHG emissions, community disruption, and the large environmental and carbon footprints of this industrial process, **it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.**

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This scientific review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or

recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://PRNewswire), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced

water purification device used to remediate wastewater from hydraulic fracturing operations

8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: “In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal *Environmental Health Perspectives* about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest.”
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we

design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))
28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”
32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement
33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All’s Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.

46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having **"developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe<sub>6</sub>+)**. In a single dose, Fe<sub>6</sub>+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe<sub>6</sub>+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe<sub>6</sub>+ can be wholly recycled and reused for well site-completion operations."
53. Richard Phillips, Exxon Mobil since 1988
54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.
55. Danny Reible
56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already "better casing standards" as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that "gas is better than coal" [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.
57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
59. Joseph Patrick Smith, Exxon
60. Richard K Smith, Nabbors Production Company
61. Paul Street, Nalco chemical company
62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.
63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
65. Sanjay Vittale, Shell Oil
66. Douglas Wyatt, URS Corporation—conflict of interest
67. Victor Ziegler, Occidental Petroleum

RE: Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of  
candidates announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list  
for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates  
for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I have personally gone through all candidate bios and done online research to assess  
experience, expertise, and any bias or conflict of interest. I created two lists, one of  
recommended candidates and the other is a list of those who either lack demonstrated  
objectivity or have a direct conflict of interest. NOTE: there are a large number of  
candidates not on EITHER of my lists, primarily because I couldn't determine their  
credibility.

Please consider appointing your committee from the following 26 people, those who  
clearly show evidence of scientific objectivity and appropriate expertise:

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley

4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.

22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," id. App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," id. § 5(b)(2), and does not contain members with inappropriate special interests. Id. § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors,

rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)

4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: "In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal Environmental Health Perspectives about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest."
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-)

voters-gets-dirt-hydrofracking)

26. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute no, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf)

[LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))

28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry

31. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”

32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement

33. Jester, Stephen, ConocoPhillips

34. George E. King, Apache Corp.

35. Gary Klecka, worked for Dow for most of this career; now an independent consultant

36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”

37. Steven Lewis, Exxon-Mobil for most of his career.

38. Abby Li, most of her career at Monsanto

39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."
53. Richard Phillips, Exxon Mobil since 1988
54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate:

epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective (environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal” lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc, revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: syracuse.com/news/index.ssf/2010/05/some\_scientists\_sat\_hydrofrack.html), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabbors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Thank you for your attention,

Adam Lindner

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

**FROM:** Peter & Irene Maizitis, North Royalton, Ohio 44133

Dear Mr. Hanlon:

Please accept and convey the following as our comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

We are writing to support the appointment of the following 30 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, we **support** these 30 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of 67 candidates whose appointment we strongly **oppose** and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of

interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased greenhouse gas (GHG) emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 30 candidates, those who clearly show evidence of scientific objectivity and appropriate expertise:**

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, PhD, Professor, Department of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel, Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach

16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination

17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez

18. Jerome Paulson

19. Joseph N. Ryan, U. of Colorado, Boulder

20. Daniel Schlenk

21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.

22. Geoffery Thyne

23. Jeanne Van Briessen (whom Food and Water Watch's lead water researcher recommends as he believes will bring a "healthy dose of precaution and skepticism")

24. Avner Vengosh (whom Food and Water Watch's lead water researcher recommends as he believes will bring a "healthy dose of precaution and skepticism")

25. Perry R. Walker

26. Paul Westerhoff

27. Allen Shapiro (whom Food and Water Watch's lead water researcher recommends as he believes will bring a "healthy dose of precaution and skepticism")

28. JP Nicot (whom Food and Water Watch's lead water researcher recommends as he believes will bring a "healthy dose of precaution and skepticism")

29. Lisa McKenzie (whom Food and Water Watch's lead water researcher recommends as he believes will bring a "healthy dose of precaution and skepticism")

30. Anthony Ingraffea (whom Food and Water Watch's lead water researcher recommends as he believes will bring a "healthy dose of precaution and skepticism")

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased greenhouse gas (GHG) emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including greenhouse gas emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in

this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://PRNewswire), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process.". (<http://s.tt/1jbFy>)
4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley – Conflict of interest: consults regularly with industry per her CV.
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)

22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:  
[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))
28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”
32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement

33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All’s Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus - not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies’ consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having “**developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe<sub>6</sub><sup>+</sup>)**”. In a single dose, Fe<sub>6</sub><sup>+</sup> can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting

color. Fe<sup>6+</sup> has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe<sup>6+</sup> can be wholly recycled and reused for well site-completion operations.”

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:

[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective. ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that “gas as better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, greenhouse gas emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabbors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

**FROM:** Loraine McCosker, 59 Elmwood Place Athens Ohio 45701

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**It is of extraordinary importance circumstances that the science regarding HPHHF be devoid of industry pressures given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington

9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate.* **However, individuals with financial conflicts should not be**

**serving as members of the SAB.**

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://PRNewswire), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process.". (<http://s.tt/1jbFy>)
4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley – Conflict of interest: consults regularly with industry per her cv.
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest

18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:  
[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))
28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"
32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement
33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having **"developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously

perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe<sup>6+</sup> has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe<sup>6+</sup> can be wholly recycled and reused for well site-completion operations.”

53. Richard Phillips, Exxon Mobil since 1988
54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:  
epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad  
Her presentations show bias as suggested by financial conflict of interest.
55. Danny Reible
56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective. ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that “gas as better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.
57. Bert Smith, Chesapeake
58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
59. Joseph Patrick Smith, Exxon
60. Richard K Smith, Nabbors Production Company
61. Paul Street, Nalco chemical company
62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.
63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
65. Sanjay Vittale, Shell Oil
66. Douglas Wyatt, URS Corporation—conflict of interest
67. Victor Ziegler, Occidental Petroleum

Thank you for your attention,  
Loraine McCosker

Date: 12/19/2012 10:17 PM  
Subject: SAB for Hydraulic Fracking

Dear Mr. Hanlon,

I am an Ohio resident and can say that I am no longer proud to be one. A fracking rig was built next to our township park, a pipeline will be built through my neighborhood in a suburb of Youngstown, and my neighbors have leased their mineral rights to the oil and gas companies to permit well drilling should they find what they are looking for. There are detonators and explosives for seismic testing located in the woods by our house, one of them 100 feet from our neighbors' birdhouse--knowledge of this only because the neighbors themselves came across it. All of this is occurring without our permission. All of this is occurring without knowing what the consequences on the health of our two very young children will be. We need qualified scientific experts on the Science Advisory Board!

The Science Advisory Board will have a profound effect on the EPA's study of the effects of fracking on groundwater and the environment. Prior SAB panels have failed the American people and have allowed contamination to occur and then persist without cleanup. Of great concern is the fact that there seems to be only one radiation expert on the panel, Joseph Ryan. Radiation experts should be placed on this panel, given that shale can contain high levels of radioactivity. Radiation is one of the contaminants that will persist in the environment the longest and can bioaccumulate. Knowing that the make-up of this panel will have a significant impact on the U.S. EPA groundwater report and national policy, I recommend the following experts for the SAB:

Henry Anderson  
Michel Boufadel  
Susan Brantly  
Bruce Brownawell  
Janice Chambers  
David Dzombak  
Robert Edstrom  
Elaine Faustman  
Dr. Madelon Finkel  
Fred Henretig  
Robert Howarth  
Anthony Ingraffea  
Lymen McDonald  
Lisa McKenzie  
Karlis Muhlenbach

Eileen Murphy  
Dr. Ingrid Padilla  
Jerome Paulson  
Joseph Ryan  
Daniel Schlenk  
Dr. Karen Swackhamer  
Geoffery Thyne  
Jeanne VanBriessen  
Amer Vengosh  
Perry Walker  
Paul Westerhoff

Please consider any conflicts of interest other nominees may have.

Thank you for you time,  
Andrea Moore  
Lowellville, OH 44436

NRDC Comments on the List of Candidates for the EPA Science Advisory Board  
Hydraulic Fracturing Advisory Panel, December, 2012 1  
December 19, 2012  
Edward Hanlon  
Designated Federal Officer  
EPA Science Advisory Board Staff Office (1400F)  
U.S. Environmental Protection Agency  
1200 Pennsylvania Avenue, N.W.  
Washington, D.C. 20460  
Comments on the List of Candidates for the

EPA Science Advisory Board Hydraulic Fracturing Advisory Panel

Dear Mr. Hanlon,

The following comments are being submitted on behalf of the Natural Resources Defense Council (NRDC). NRDC is a national, non-profit legal and scientific organization with 1.3 million members and activists nationwide. Since its founding in 1970, NRDC has been actively involved in a wide range of environmental issues, including oil and gas exploration and production as well as drinking water protection. NRDC is currently actively involved in issues surrounding oil and gas development and hydraulic fracturing. NRDC greatly appreciates the effort that the U.S. Environmental Protection Agency (EPA) has dedicated, and plans to devote in the future, to investigate the potential public health and environmental protection issues associated with hydraulic fracturing. In particular we note the steps the agency has taken to ensure maximum public input and transparency.

NRDC strongly supports the selection criteria established by the EPA for nominees to the Panel, including: (a) scientific and/or technical expertise, knowledge, and experience; (b) availability and willingness to serve; (c) absence of financial conflicts of interest; (d) absence of appearance of a lack of impartiality; (e) skills working in committees, subcommittees and advisory panels; and, for the Panel as a whole; (f) diversity of expertise and viewpoints. With these criteria in mind, NRDC respectfully submits the following comments on the nominated candidates.

Nominees with financial conflicts of interest and an appearance of lack of impartiality should be excluded

In keeping with the criteria established by EPA itself, we urge EPA to select panel members who have no financial conflicts of interest and are impartial, and to exclude any nominees without those qualifications. It is essential that any nominees be independent, free from any biases, and committed to pure scientific inquiry. NRDC Comments on the List of Candidates for the EPA Science Advisory Board Hydraulic Fracturing Advisory Panel, December, 2012 2

These criteria ensure nominees who are dedicated to the public interest as well as to the mission of the EPA. The Agency cannot accomplish its vital mission or fulfill its legal duty if its regulatory priorities and environmental concerns are influenced by people who have a financial stake in the outcome.

The recommendations of this SAB Panel are likely to impact federal and/or state regulation of hydraulic fracturing. Yet in general, the oil and gas industry opposes any regulations that strengthen protections of health and the environment due to financial priorities and has not supported independent scientific inquiry into these issues. The Panel, therefore, must be composed in a manner that ensures that this perspective does not influence scientific decisions. Thus, nominees affiliated with industry or receiving industry support are unfit to provide EPA with robust independent scientific advice. By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible. The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is

"fairly balanced in terms of points of view represented and the function to be performed," id. § 5(b)(2), and does not contain members with inappropriate special interests. Id. § 5(b)(3).

EPA invited comments on any nominees that had relevant expertise and willingness to serve on the panel. EPA, however, did not omit nominees that failed to meet its other criteria, particularly the absence of financial conflicts of interest and the absence of an appearance of a lack of impartiality. Some nominees are clearly ineligible for service on the Panel due to financial conflicts and should have been omitted. It is unreasonable to expect the public to develop informative and researched comments on 144 nominated panel members in such a short period of time when in fact only a very small number of them will be selected to serve on the panel. Since EPA will be reviewing their confidential disclosure forms and have additional information that is not available to the public, this screening should have been done before publishing the list for comment. We are additionally concerned that the conflicts of some members were not disclosed in the information provided in the biosketches.

The Panel must be composed of scientists who are able to provide a fair and complete review of all relevant data or issues. Regardless of technical and subject-matter expertise and relevant experience, individuals with financial conflicts should not be serving as members of the Panel when there are candidates without such conflicts. Industry representatives with such knowledge and expertise will still have opportunities to provide information relevant to the deliberations of the Panel NRDC Comments on the List of Candidates for the EPA Science Advisory Board Hydraulic Fracturing Advisory Panel, December, 2012 3

during public comment and through the extensive stakeholder process devised by EPA, as will public interest and environmental organizations.

We object to the following individuals

With all due respect to their experience and knowledge, the following individuals cannot be considered impartial and/or are conflicted, and should not serve on this Panel, for the reasons provided here.

- Nominees who are currently employed by the oil and gas industry (operators, service companies, etc), and therefore do not meet the selection criteria for absence of financial conflicts of interest and absence of appearance of a lack of impartiality:

Armagost, Kenneth	Anadarko Petroleum Corporation
Bratton, Thomas	Schlumberger Technology Corporation
Buscheck, Timothy	Chevron Energy Technology Company
Daniels, Eric	Chevron Energy Technology Company
East, Loyd	Halliburton Energy Services
Ellison, Timothy	ExxonMobil Upstream Research Company
Hufford, Walter	Talisman Energy USA
Hyden, Ron	Halliburton Energy Services
Jester, Stephen	ConocoPhillips
King, George	Apache Corporation
Lynch, Keith Wilson	ConocoPhillips Company
Mamerow, Steve	Pioneer Natural Resources
Moos, Daniel	Baker Hughes
Nygaard, K.J.	ExxonMobil Production Company

Parkerton, Thomas	ExxonMobil Biomedical Sciences
Phillips, Richard	ExxonMobil Biomedical Sciences, Inc.
Smith, Bert	Chesapeake Energy Corporation
Smith, Joseph Patrick	ExxonMobil Upstream Research Company
Smith, Richard	Nabors Completion and Production Services
Street, Paul	Nalco
Vitthal, Sanjay	Shell Center of Excellence for Unconventional Resources
Ziegler, Victor	Occidental Petroleum Corporation

☐ Nominees who work as consultants for the oil and gas industry, and therefore do not meet the selection criteria for absence of financial conflicts of interest and may not meet the selection criteria for absence of appearance of a lack of impartiality:

Arthur, Daniel  
 ALL Consultingi  
 Bagawandoss, Kesavalu  
 Accutest Laboratoriesii  
 Coleman, Nancy Pees  
 Environmental Consultantsiii  
 Collins, James  
 Independent Consultantiv  
 Erb, James  
 Independent Consultantv  
 Fassett, Gordon  
 HDR Engineering, Inc.vi  
 Fontana, John  
 Vista GeoScience LLCvii  
 Hayes, Thomas  
 Gas Technology Institute E&P Centerviii  
 Kaback, Dawn  
 AMEC Environment & Infrastructure, Inc.ix  
 Malouta, Dean  
 Independent Oil and Gas Consultantx  
 Raja, Suresh  
 Providence Engineering and Environmental  
 Group, LLCxi  
 Syed, Talib  
 Independent Consultantxii  
 Tintera, John James  
 Sebree & Tinteraxiii  
 Vitale, Rock  
 Environmental Standards, Inc.xiv  
 • Nominees who receive grant money from  
 the oil and gas industry, and therefore do not  
 meet the selection criteria for absence of

financial conflicts of interest and may not meet the selection criteria for absence of appearance of a lack of impartiality:

Burnett, David  
Texas A&M University<sup>xv</sup>  
Davis, Thomas  
Colorado School of Mines<sup>xvi</sup>  
Dunn-Norman, Shari  
Missouri University of Science and  
Technology<sup>xvii</sup>  
Economides, Michael  
University of Houston<sup>xviii</sup>  
Ensor, Katherine Bennett  
Rice University<sup>xix</sup>  
Olson, Jon  
University of Texas<sup>xx</sup>  
Reible, Danny  
University of Texas<sup>xxi</sup>  
Tutuncu, Azra  
Colorado School of Mines<sup>xxii</sup>

• Other:

Almond, Stephen  
MeadWestvaco  
Barry, Terence  
AquaMost  
Cline, Scott Bradley  
U.S. Internal Revenue Service  
Curtright, Aimee  
RAND Corporation  
Klecka, Gary  
Independent Consultant  
Dr. Almond's current employer,  
MeadWestvaco, provides goods and services  
to the oil and gas industry<sup>xxiii</sup>, and therefore  
he does not meet the selection criteria for  
absence of financial conflicts of interest and  
may not meet the selection criteria for  
absence of appearance of a lack of  
impartiality. Furthermore, as stated in his  
biosketch, Dr. Almond, "...worked for  
Halliburton for over 30 years..." and  
therefore may not meet the selection criteria  
for absence of appearance of a lack of  
impartiality.  
Dr. Barry's current employer, AquaMost,

provides services to the oil and gas industry<sup>xxiv</sup> and therefore he does not meet the selection criteria for absence of financial conflicts of interest and may not meet the selection criteria for absence of appearance of a lack of impartiality.

Dr. Cline has made public statements<sup>xxv</sup> that indicate he may have preconceived conclusions about the potential impacts of hydraulic fracturing on drinking water and ground water, and therefore he does not meet the selection criteria for absence of a lack of impartiality.

As stated in her biosketch, Dr. Curtright, "...was the organizer and technical lead for a conference on the technical, legal, and regulatory challenges to using coal mine drainage for hydraulic fracturing, sponsored by the Marcellus Shale Coalition..."

According to their website, The Marcellus Shale Coalition "works with exploration and production, midstream, and supply chain partners in the Appalachian Basin and across the country to address issues regarding the production of clean, job-creating, American natural gas from the Marcellus and Utica Shale plays."<sup>xxvixxxviii</sup> All 11 of the Marcellus Shale Coalition's executive board members are high-ranking oil and gas industry employees and its board is composed of 45 oil and gas companies. As such, Dr. Curtright may not meet the selection criteria for absence of financial conflicts of interest and absence of appearance of a lack of impartiality.

As stated in his biosketch, Dr. Klecka was employed by Dow Chemical Company for over 30 years. Dow Chemical Company manufactures chemicals used in the oil and gas industry.<sup>xxix</sup> As such, Dr. Klecka may not meet the selection criteria for absence of financial conflicts of interest and absence of appearance of a lack of impartiality.

We support the nominations of the following individuals who have the requisite scientific and technical expertise, knowledge, and

experience, are free of conflict, and we believe to be impartial:

Bales, Jerad

U.S. Geological Survey

Bank, Tracy

University of Buffalo

Boufadel, Michel

Edward Hanlon  
Designated Federal Officer  
EPA Science Advisory Board Staff Office (1400F)  
U.S. Environmental Protection Agency  
1200 Pennsylvania Avenue, N.W.  
Washington, D.C. 20460

Comments on the List of Candidates for the  
EPA Science Advisory Board Hydraulic Fracturing Advisory Panel

Dear Mr. Hanlon,

The following comments are being submitted on behalf of the Natural Resources Defense Council (NRDC). NRDC is a national, non-profit legal and scientific organization with 1.3 million members and activists nationwide. Since its founding in 1970, NRDC has been actively involved in a wide range of environmental issues, including oil and gas exploration and production as well as drinking water protection. NRDC is currently actively involved in issues surrounding oil and gas development and hydraulic fracturing.

NRDC greatly appreciates the effort that the U.S. Environmental Protection Agency (EPA) has dedicated, and plans to devote in the future, to investigate the potential public health and environmental protection issues associated with hydraulic fracturing. In particular we note the steps the agency has taken to ensure maximum public input and transparency.

NRDC strongly supports the selection criteria established by the EPA for nominees to the Panel, including: (a) scientific and/or technical expertise, knowledge, and experience; (b) availability and willingness to serve; (c) absence of financial conflicts of interest; (d) absence of appearance of a lack of impartiality; (e) skills working in committees, subcommittees and advisory panels; and, for the Panel as a whole; (f) diversity of expertise and viewpoints. With these criteria in mind, NRDC respectfully submits the following comments on the nominated candidates.

**Nominees with financial conflicts of interest and an appearance of lack of impartiality should be excluded**

In keeping with the criteria established by EPA itself, we urge EPA to select panel members who have no financial conflicts of interest and are impartial, and to exclude any nominees without those qualifications. It is essential that any nominees be independent, free from any biases, and committed to pure scientific inquiry.

These criteria ensure nominees who are dedicated to the public interest as well as to the mission of the EPA. The Agency cannot accomplish its vital mission or fulfill its legal duty if its regulatory priorities and environmental concerns are influenced by people who have a financial stake in the outcome.

The recommendations of this SAB Panel are likely to impact federal and/or state regulation of hydraulic fracturing. Yet in general, the oil and gas industry opposes any regulations that strengthen protections of health and the environment due to financial priorities and has not supported independent scientific inquiry into these issues. The Panel, therefore, must be composed in a manner that ensures that this perspective does not influence scientific decisions. Thus, nominees affiliated with industry or receiving industry support are unfit to provide EPA with robust independent scientific advice.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible. The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

EPA invited comments on any nominees that had relevant expertise and willingness to serve on the panel. EPA, however, did not omit nominees that failed to meet its other criteria, particularly the absence of financial conflicts of interest and the absence of an appearance of a lack of impartiality. Some nominees are clearly ineligible for service on the Panel due to financial conflicts and should have been omitted. It is unreasonable to expect the public to develop informative and researched comments on 144 nominated panel members in such a short period of time when in fact only a very small number of them will be selected to serve on the panel. Since EPA will be reviewing their confidential disclosure forms and have additional information that is not available to the public, this screening should have been done before publishing the list for comment. We are additionally concerned that the conflicts of some members were not disclosed in the information provided in the biosketches.

The Panel must be composed of scientists who are able to provide a fair and complete review of all relevant data or issues. Regardless of technical and subject-matter expertise and relevant experience, individuals with financial conflicts should not be serving as members of the Panel when there are candidates without such conflicts. Industry representatives with such knowledge and expertise will still have opportunities to provide information relevant to the deliberations of the Panel

during public comment and through the extensive stakeholder process devised by EPA, as will public interest and environmental organizations.

**We object to the following individuals**

With all due respect to their experience and knowledge, the following individuals cannot be considered impartial and/or are conflicted, and should not serve on this Panel, for the reasons provided here.

- Nominees who are currently employed by the oil and gas industry (operators, service companies, etc), and therefore do not meet the selection criteria for absence of financial conflicts of interest and absence of appearance of a lack of impartiality:

Armagost, Kenneth	Anadarko Petroleum Corporation
Bratton, Thomas	Schlumberger Technology Corporation
Buscheck, Timothy	Chevron Energy Technology Company
Daniels, Eric	Chevron Energy Technology Company
East, Loyd	Halliburton Energy Services
Ellison, Timothy	ExxonMobil Upstream Research Company
Hufford, Walter	Talisman Energy USA
Hyden, Ron	Halliburton Energy Services
Jester, Stephen	ConocoPhillips
King, George	Apache Corporation
Lynch, Keith Wilson	ConocoPhillips Company
Mamerow, Steve	Pioneer Natural Resources
Moos, Daniel	Baker Hughes
Nygaard, K.J.	ExxonMobil Production Company
Parkerton, Thomas	ExxonMobil Biomedical Sciences
Phillips, Richard	ExxonMobil Biomedical Sciences, Inc.
Smith, Bert	Chesapeake Energy Corporation
Smith, Joseph Patrick	ExxonMobil Upstream Research Company
Smith, Richard	Nabors Completion and Production Services
Street, Paul	Nalco
Vitthal, Sanjay	Shell Center of Excellence for Unconventional Resources
Ziegler, Victor	Occidental Petroleum Corporation

- Nominees who work as consultants for the oil and gas industry, and therefore do not meet the selection criteria for absence of financial conflicts of interest and may not meet the selection criteria for absence of appearance of a lack of impartiality:

Arthur, Daniel	ALL Constulting <sup>i</sup>
Bagawandoss, Kesavalu	Accutest Laboratories <sup>ii</sup>
Coleman, Nancy Pees	Environmental Consultants <sup>iii</sup>
Collins, James	Independent Consultant <sup>iv</sup>
Erb, James	Independent Consultant <sup>v</sup>
Fassett, Gordon	HDR Engineering, Inc. <sup>vi</sup>
Fontana, John	Vista GeoScience LLC <sup>vii</sup>
Hayes, Thomas	Gas Technology Institute E&P Center <sup>viii</sup>
Kaback, Dawn	AMEC Environment & Infrastructure, Inc. <sup>ix</sup>
Malouta, Dean	Independent Oil and Gas Consultant <sup>x</sup>
Raja, Suresh	Providence Engineering and Environmental Group, LLC <sup>xi</sup>
Syed, Talib	Independent Consultant <sup>xii</sup>
Tintera, John James	Sebree & Tintera <sup>xiii</sup>
Vitale, Rock	Environmental Standards, Inc. <sup>xiv</sup>

- Nominees who receive grant money from the oil and gas industry, and therefore do not meet the selection criteria for absence of financial conflicts of interest and may not meet the selection criteria for absence of appearance of a lack of impartiality:

Burnett, David	Texas A&M University <sup>xv</sup>
Davis, Thomas	Colorado School of Mines <sup>xvi</sup>
Dunn-Norman, Shari	Missouri University of Science and Technology <sup>xvii</sup>
Economides, Michael	University of Houston <sup>xviii</sup>
Ensor, Katherine Bennett	Rice University <sup>xix</sup>
Olson, Jon	University of Texas <sup>xx</sup>
Reible, Danny	University of Texas <sup>xxi</sup>
Tutuncu, Azra	Colorado School of Mines <sup>xxii</sup>

- Other:

Almond, Stephen	MeadWestvaco
Barry, Terence	AquaMost
Cline, Scott Bradley	U.S. Internal Revenue Service
Curtright, Aimee	RAND Corporation
Klecka, Gary	Independent Consultant

Dr. Almond's current employer, MeadWestvaco, provides goods and services to the oil and gas industry<sup>xxiii</sup>, and therefore he does not meet the selection criteria for absence of financial conflicts of interest and may not meet the selection criteria for absence of appearance of a lack of impartiality. Furthermore, as stated in his

biosketch, Dr. Almond, “...worked for Halliburton for over 30 years...” and therefore may not meet the selection criteria for absence of appearance of a lack of impartiality.

Dr. Barry’s current employer, AquaMost, provides services to the oil and gas industry<sup>xxiv</sup> and therefore he does not meet the selection criteria for absence of financial conflicts of interest and may not meet the selection criteria for absence of appearance of a lack of impartiality.

Dr. Cline has made public statements<sup>xxv</sup> that indicate he may have preconceived conclusions about the potential impacts of hydraulic fracturing on drinking water and ground water, and therefore he does not meet the selection criteria for absence of a lack of impartiality.

As stated in her biosketch, Dr. Curtright, “...was the organizer and technical lead for a conference on the technical, legal, and regulatory challenges to using coal mine drainage for hydraulic fracturing, sponsored by the Marcellus Shale Coalition...” According to their website, The Marcellus Shale Coalition “works with exploration and production, midstream, and supply chain partners in the Appalachian Basin and across the country to address issues regarding the production of clean, job-creating, American natural gas from the Marcellus and Utica Shale plays.”<sup>xxvi</sup> All 11 of the Marcellus Shale Coalition’s executive board members<sup>xxvii</sup> are high-ranking oil and gas industry employees and its board is composed of 45 oil and gas companies<sup>xxviii</sup>. As such, Dr. Curtright may not meet the selection criteria for absence of financial conflicts of interest and absence of appearance of a lack of impartiality.

As stated in his biosketch, Dr. Klecka was employed by Dow Chemical Company for over 30 years. Dow Chemical Company manufactures chemicals used in the oil and gas industry.<sup>xxix</sup> As such, Dr. Klecka may not meet the selection criteria for absence of financial conflicts of interest and absence of appearance of a lack of impartiality.

**We support the nominations of the following individuals who have the requisite scientific and technical expertise, knowledge, and experience, are free of conflict, and we believe to be impartial:**

Bales, Jerad	U.S. Geological Survey
Bank, Tracy	University of Buffalo
Boufadel, Michel	New Jersey Institute of Technology
Boyer, Elizabeth	Pennsylvania State University
Brantley, Susan	Pennsylvania State University
Dzombak, David	Carnegie Mellon University
Finkel, Madelon	Cornell University
Goldstein, Bernard	University of Pittsburgh

Goode, Daniel	U.S. Geological Survey
Henretig, Fred	University of Pennsylvania
Howarth, Robert	Cornell University
Ingraffea, Anthony	Cornell University
McKenzie, Lisa	Colorado School of Public Health
Muehlenbachs, Karlis	University of Alberta
Murdoch, Lawrence C.	Clemson University
Murphy, Eileen	Rutgers University
Paulson, Jerome	George Washington University
Ryan, Joseph	University of Colorado
Saiers, James	Yale University
Shapiro, Allen	U.S. Geological Survey
Swackhamer, Deborah	University of Minnesota
Thyne, Geoffrey	Science Based Solutions
VanBriesen, Jeanne	Carnegie Mellon University
Vengosh, Avner	Duke University
Williams, Mark	University of Colorado

**At this time, we are neutral to all prospective nominees not listed above. These other nominees appear to be qualified, non-conflicted and impartial, but we do not have sufficient information to comment on their nominations at this time.**

Thank you for your consideration of these comments.

Respectfully,

Regular mail: USEPA Science Advisory Board (1400R), 1200 Pennsylvania Ave., N.W., Washington, D.C. 20460 Office location/Courier Address: USEPA Science Advisory Board, Ronald Reagan Building, 1300 Pennsylvania Avenue, NW, Suite 31150, Washington, D.C. 20004

**RE:** Federal Register Notice Vol. 77 Number 162 Pages 50505-50506 and list of candidates announced at Yosemite.epa.gov re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject,

based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

1. Henry Anderson
2. Michel Boufadel
3. Susan Brantley
4. Bruce Brownawell
5. Janice Chambers
6. David A. Dzombak
7. Robert Edstrom
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Fred M. Henretig, University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald, statistician and biologist
14. Lisa McKenzie

15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works

completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, “These (state regulatory agencies) have field inspectors, rules and regulations, if you’re a bad actor, not doing a good job, they’re going to find you. It’s something people are fearful of, but it’s not a reality.” And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)

4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Fred Baldassare, Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Thomas R. Bratton, Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. David Burnett
11. Buscheck, Timothy E
12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: “In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal *Environmental Health Perspectives* about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest.”
13. Corrie Clark
14. Scott Bradley Cline
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. James W. Collins
17. John Corra—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am.

Petroleum Inst.)

22. Lloyd East (Halliburton)
23. Michael Economides, (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:  
[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Ellsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Ellsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))
28. Gordon Fassett, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
29. John V. Fontana, Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
30. Thomas D. Hayes, Gas Technology Institute E&P Center: extensive financial ties to industry
31. Walter R. Hufford, Talisman Energy USA 30 years’ experience in “energy industry”
32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement

33. Stephen Jester, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All’s Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. KJ Nygaard, Exxon Mobil
48. Jon Olson funding from oil and gas companies’ consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having “**developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium,

calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations.”

53. Richard Phillips, Exxon Mobil since 1988
54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.
55. Danny Reible
56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.
57. Bert Smith, Chesapeake
58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
59. Joseph Patrick Smith, Exxon
60. Richard K Smith, Nabbors Production Company
61. Paul Street, Nalco chemical company
62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.
63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
65. Sanjay Vittale, Shell Oil
66. Douglas Wyatt, URS Corporation—conflict of interest
67. Victor Ziegler, Occidental Petroleum

Sincerely,  
Mary Ellen Noss

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea

13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its

regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://PRNewswire), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: "In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal *Environmental Health Perspectives* about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest."
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)

19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:  
[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))
28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"
32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement
33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having **"developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously

perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe<sup>6+</sup> has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe<sup>6+</sup> can be wholly recycled and reused for well site-completion operations.”

53. Richard Phillips, Exxon Mobil since 1988
54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:  
epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad  
Her presentations show bias as suggested by financial conflict of interest.
55. Danny Reible
56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.
57. Bert Smith, Chesapeake
58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
59. Joseph Patrick Smith, Exxon
60. Richard K Smith, Nabbors Production Company
61. Paul Street, Nalco chemical company
62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.
63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
65. Sanjay Vittale, Shell Oil
66. Douglas Wyatt, URS Corporation—conflict of interest
67. Victor Ziegler, Occidental Petroleum

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and**

**conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez

18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the

credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://PRNewswire), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report], which was

funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process.". (<http://s.tt/1jbFy>)

4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: “In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal *Environmental Health Perspectives* about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest.”
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is

groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))
28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”
32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement
33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive

contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)

40. Keith Wilson Lynch

41. Dean Malouta (most of his career with Shell)

42. Steve Mamerow (Pioneer Natural Resources)

43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry

44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.

45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.

46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.

47. Nygaard, KJ, Exxon Mobil

48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.

49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.

50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.

51. Thomas Parkerton, Exxon Mobil entire career

52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having **"developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate:

epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabbors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Thank you for your attention,

Greg Pace

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

**FROM:** Vanessa Pesec, 11705 Cali Court, Concord, OH 44077

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing. I am in support of Heather Cantino's research:

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works

completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://pr.newswire), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)

4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley – Conflict of interest: consults regularly with industry per her cv.
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a->

[resources/item/1429-visiting-professor-weighs-in-on-fracking](#): “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))

28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry

31. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”

32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement

33. Jester, Stephen, ConocoPhillips

34. George E. King, Apache Corp.

35. Gary Klecka, worked for Dow for most of this career; now an independent consultant

36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”

37. Steven Lewis, Exxon-Mobil for most of his career.

38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "**developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**". In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."
53. Richard Phillips, Exxon Mobil since 1988
54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of

interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:

[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective. ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that “gas as better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise and objectivity, knowledge, and experience.

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce

5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. JP Nicot
18. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
19. Jerome Paulson
20. Joseph N. Ryan, U. of Colorado, Boulder
21. Daniel Schlenk
22. Allen Shaprio
23. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in

the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.

24. Geoffery Thyne

25. Jeanne Van Briessen

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific

expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased green house gas (ghg) emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

27. Henry Anderson

28. Boufadel, Michel

29. Susan Brantley

30. Brownawell, Bruce

31. Janice Chambers

32. Dzombak, David A.

33. Edstrom, Robert

34. Elaine M. Faustman, Professor Dept.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington

35. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University

36. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist

37. Robert Howarth

38. Anthony Ingraffea

39. Lyman McDonald statistician and biologist

40. Lisa McKenzie

41. Karlis Muehlenbach
42. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
43. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
44. Jerome Paulson
45. Joseph N. Ryan, U. of Colorado, Boulder
46. Daniel Schlenk
47. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
48. Geoffery Thyne
49. Jeanne Van Briessen
50. Avner Vengosh
51. Perry R. Walker
52. Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias.**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate.* **However, individuals with financial conflicts should not be serving as members of the SAB.**

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

- 68. Stephen Almond, MeadWestvaco
- 69. W. Kenneth Armagost, Andarko Petroleum

70. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://www.examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://www.prnewswire.com), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process.". (<http://s.tt/1jbFy>)
71. Stephen Bachu
72. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
73. Baldassare, Fred. Conflict of interest.
74. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
75. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
76. James Bruckner—financial ties to industry
77. Burnett, David
78. Buscheck, Timothy E
79. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: "In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal *Environmental Health Perspectives* about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest."
80. Corrie Clark
81. Cline, Scott Bradley
82. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
83. Collins, James W
84. Corra, John—WY political conflict of interest
85. Eric Daniels (Chevron)
86. Thomas Davis, CO School of Mines
87. Joseph deGeorge (Merck)

88. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
89. Lloyd East (Halliburton)
90. Economides, Michael (consultant; editor-in-chief Energy Tribune)
91. Timothy Ellison (Exxon-Mobil)
92. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:  
[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
93. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

94. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))
95. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” (hdrinc.com) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
96. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
97. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
98. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”

99. Ron Hyden, Director of Technology for Halliburton's Production Enhancement
100. Jester, Stephen, ConocoPhillips
101. George E. King, Apache Corp.
102. Gary Klecka, worked for Dow for most of this career; now an independent consultant
103. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."
104. Steven Lewis, Exxon-Mobil for most of his career.
105. Abby Li, most of her career at Monsanto
106. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
107. Keith Wilson Lynch
108. Dean Malouta (most of his career with Shell)
109. Steve Mamerow (Pioneer Natural Resources)
110. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
111. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
112. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
113. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
114. Nygaard, KJ, Exxon Mobil
115. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
116. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
117. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
118. Thomas Parkerton, Exxon Mobil entire career
119. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "**developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**". In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it

reduces the formation of scale-causing metals, and removes compounds imparting color. Fe<sup>6+</sup> has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe<sup>6+</sup> can be wholly recycled and reused for well site-completion operations.”

120. Richard Phillips, Exxon Mobil since 1988
121. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.
122. Danny Reible
123. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.
124. Bert Smith, Chesapeake
125. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
126. Joseph Patrick Smith, Exxon
127. Richard K Smith, Nabbors Production Company
128. Paul Street, Nalco chemical company
129. Talib Syed – not a scientist. Production engineer, whole career has been in industry.
130. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
131. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
132. Sanjay Vittale, Shell Oil
133. Douglas Wyatt, URS Corporation—conflict of interest
134. Victor Ziegler, Occidental Petroleum

Thank you for your consideration of my comments.

Sincerely,

Pegge Petkovich

Date: 12/17/2012 11:16 AM  
Subject: SAB panel recommendations

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am e-mailing to support the appointment of the following 27 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 27 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. Following this list is a second list of those whose appointments I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.

Please consider appointing your committee from the following 27 people, those who clearly show evidence of scientific objectivity and appropriate expertise:

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers

6. Dzombak, David A.

7. Edstrom, Robert

8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington

9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University

10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist

11. Robert Howarth

12. Anthony Ingraffea, Cornell University, eminent hydraulic fracturing engineer and researcher

13. Lyman McDonald statistician and biologist

14. Lisa McKenzie

15. Karlis Muehlenbach

16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination

17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez

18. Jerome Paulson

19. Joseph N. Ryan, U. of Colorado, Boulder

20. Daniel Schlenk

21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.

22. Geoffery Thyne

23. Jeanne Van Briessen

24. Avner Vengosh

25. Perry R. Walker

26. Paul Westerhoff

27. James Northrup

The scientific credibility of the EPA is damaged by committees with real or perceived bias

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," id. App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," id. § 5(b)(2), and does not contain members with inappropriate special interests. Id. § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory

requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)

4. Stephen Bachu

5. E. Scott Bair - conflict of interest with financial ties to industry. Recent funding not listed.

6. Baldassare, Fred. Conflict of interest.

7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations

8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.

9. James Bruckner-financial ties to industry

10. Burnett, David

11. Buscheck, Timothy E

12. Gail Charnley - Conflict of interest: consults regularly with industry per her cv.

13. Corrie Clark

14. Cline, Scott Bradley

15. Nancy Pees Coleman

(<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)

16. Collins, James W

17. Corra, John-WY political conflict of interest

18. Eric Daniels (Chevron)

19. Thomas Davis, CO School of Mines

20. Joseph deGeorge (Merck)

21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)

22. Lloyd East (Halliburton)

23. Economides, Michael (consultant; editor-in-chief Energy Tribune)

24. Timothy Ellison (Exxon-Mobil)

25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:

[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))

26. Derek Elsworth

<http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: "One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. 'Certainly you're making pathways in the deep strata that didn't previously exist, but those are maybe a couple of kilometres away from your drinking water. You can't say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them,

looking at flow rates, permeability, tracers and how fast tracers move. This isn't an absolute no, but it's likely you won't develop connections between these because you get intervening beds of low permeability that don't allow transmission.' ...As for abandoned wells causing contamination, he stressed good management. 'Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.'"

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate's inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last "hundreds of years" is another indication of the candidate's lack of inclination to evaluate this technology's ability to be protective of water and human health for future generations as USEPA's mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation:

[ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf)

[-%20Written%20Comments%20before%20the%20the%20Committee.pdf\)](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf)

28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A "water rights" specialist, who "after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission..." ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry

31. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"

32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement

33. Jester, Stephen, ConocoPhillips

34. George E. King, Apache Corp.

35. Gary Klecka, worked for Dow for most of this career; now an independent consultant

36. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."

37. Steven Lewis, Exxon-Mobil for most of his career.

38. Abby Li, most of her career at Monsanto

39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus-not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."

53. Richard Phillips, Exxon Mobil since 1988
54. Laura Plunkett, Integrative Biostrategies, LLC -industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.
55. Danny Reible
56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already "better casing standards" as possibly being adequately protective.  
([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that "gas as better than coal"  
[lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.
57. Bert Smith, Chesapeake
58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:  
[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
59. Joseph Patrick Smith, Exxon
60. Richard K Smith, Nabbors Production Company
61. Paul Street, Nalco chemical company
62. Talib Syed - not a scientist. Production engineer, whole career has been in industry.
63. James John Tintera - not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
64. Rock Vitale, Environmental Standards, Inc.-not a scientist, works entirely for industry "managing liability". No advanced degree.
65. Sanjay Vittale, Shell Oil
66. Douglas Wyatt, URS Corporation-conflict of interest
67. Victor Ziegler, Occidental Petroleum

Sincerely,  
Ron Prosek, Vice-President

RE: Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of candidates announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

FROM: Kathryn Rapose, Ashtabula, Ohio 44004

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial.

Following this list is a second list of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.

Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and

Director of the Office of Global Health at the Weill Medical College,  
Cornell University

10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder Mr. Ryan may be the only candidate with actual expertise in radiation. Considering the potential for radioactive by-products in this process, Mr. Ryan should be a top candidate.
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

The scientific credibility of the EPA is damaged by committees with real or perceived bias

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article (examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
4. Stephen Bachu
5. E. Scott Bair - conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations

8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner-financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley - Conflict of interest: consults regularly with industry per her cv.
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman  
(<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John-WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:  
[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Elsworth  
<http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: "One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. 'Certainly you're making pathways in the deep strata that didn't previously exist, but those are maybe a couple of kilometres away from your drinking water. You can't say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn't an absolute no, but it's likely you won't develop connections between these because you get intervening beds of low permeability that don't allow transmission.' ...As for abandoned wells causing contamination, he stressed good management. 'Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.'"

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These

statements indicate the candidate's inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last "hundreds of years" is another indication of the candidate's lack of inclination to evaluate this technology's ability to be protective of water and human health for future generations as USEPA's mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation:

[ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20--%20Written%20Comments%20before%20the%20the%20Committee.pdf))

28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A "water rights" specialist, who "after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission..." ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry

31. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"

32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement

33. Jester, Stephen, ConocoPhillips

34. George E. King, Apache Corp.

35. Gary Klecka, worked for Dow for most of this career; now an independent consultant

36. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."

37. Steven Lewis, Exxon-Mobil for most of his career.

38. Abby Li, most of her career at Monsanto

39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)

40. Keith Wilson Lynch

41. Dean Malouta (most of his career with Shell)

42. Steve Mamerow (Pioneer Natural Resources)

43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry

44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower

costs, reduce risk or improve productivity for the global oil and gas industry.

45. Michael Nickolaus-not a scientist, works for industry-funded (American Petroleum Institute among others) organization.

46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.

47. Nygaard, KJ, Exxon Mobil

48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.

49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.

50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.

51. Thomas Parkerton, Exxon Mobil entire career

52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC -industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate:

[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already "better casing standards" as possibly being adequately protective.

([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing))

/) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that "gas as better than coal" [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed - not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera - not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.-not a scientist, works entirely for industry "managing liability". No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation-conflict of interest

67. Victor Ziegler, Occidental Petro

Thank you for your consideration of these comments.

The issue of safe groundwater is of utmost importance. I believe that drinking water will be more precious than oil to my children.

Please appoint credible and impartial candidates to the Science Advisory Board.

Sincerely,

Kathryn Rapose  
Ashtabula, Ohio 44004

Re: Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of candidates announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please review my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing. I wish for you to convey public comments regarding hydraulic fracturing.

I write to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. I've also included a second list of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Given the record of deep shale drilling and high pressure horizontal

hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest. I regard our water particularly and our natural resources in general as precious and worthy of our utmost consideration.

Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel SchlenkDr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
21. Geoffery Thyne
22. Jeanne Van Briessen

- 23. Avner Vengosh
- 24. Perry R. Walker
- 25. Paul Westerhoff

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest. The scientific credibility of the EPA is damaged by committees with real or perceived bias.

As a concerned citizen, I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides

collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," id. App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," id. § 5(b)(2), and does not contain members with inappropriate special interests. Id. § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article (examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
4. Stephen Bachu

5. E. Scott Bair – conflict of interest with financial ties to industry.  
Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells  
an advanced water purification device used to remediate wastewater from  
hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley. Conflict of interest: consults regularly with industry  
per her cv. According to the Washington Post: “In 2006, for example, she  
wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher  
restrictions on power-plant emissions in neighboring Illinois on behalf of  
Americans for Balanced Energy Choices, a nonprofit group funded by  
utilities, railroads and mining companies. In 2004, she and a colleague  
wrote a letter to the technical journal Environmental Health Perspectives  
about a study on human testing of pesticides that they had co-authored  
without disclosing that it had been funded partly by pesticide makers. The  
journal’s editor ran a disclosure after Charnley and her colleague disputed  
having a conflict of interest.”
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman  
([http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGas  
NancyColeman-8-7-12.pdf](http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf))
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and  
Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:  
[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-  
voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Ellsworth  
[http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-  
weighs-in-on-fracking](http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking):  
“One of these concerns [with deep-shale drilling and high-volume  
horizontal hydraulic fracturing] is groundwater contamination from fracking  
fluid, which Dr Ellsworth regarded as doubtful. ‘Certainly you’re making  
pathways in the deep strata that didn’t previously exist, but those are

maybe a couple of kilometres away from your drinking water. You can't say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn't an absolute no, but it's likely you won't develop connections between these because you get intervening beds of low permeability that don't allow transmission.' ...As for abandoned wells causing contamination, he stressed good management. 'Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.'"

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate's inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last "hundreds of years" is another indication of the candidate's lack of inclination to evaluate this technology's ability to be protective of water and human health for future generations as USEPA's mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation:  
[ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%202018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%202018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))

28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A "water rights" specialist, who "after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission..." ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry

31. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"

32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement

33. Jester, Stephen, ConocoPhillips

34. George E. King, Apache Corp.

35. Gary Klecka, worked for Dow for most of this career; now an independent consultant

36. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric

products.”

37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having “developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and

acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations.”

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective  
([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal”

[lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc),

revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:

[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabbors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Thanks for your careful consideration,

Lynda Rose

Western Energy Alliance comments - EPA SAB Hydraulic Fracturing Panel Nominees  
121912.pdf

December 19, 2012  
*Submitted via email: [hanlon.edward@epa.gov](mailto:hanlon.edward@epa.gov)*

Mr. Edward Hanlon  
Designated Federal Officer  
Science Advisory Board Staff Office  
Environmental Protection Agency  
1200 Pennsylvania Ave., NW  
Washington, DC 20004

**RE: Candidates for the EPA Science Advisory Board Hydraulic Fracturing  
Advisory Panel**

Dear Mr. Hanlon:

Western Energy Alliance appreciates the opportunity to provide comments on the nominees for the Environmental Protection Agency's (EPA) Science Advisory Board Hydraulic Fracturing Advisory Panel. We represent over 400 companies engaged in all aspects of environmentally responsible exploration and production of natural gas and oil across the West. Our members include highly trained scientists and engineers with many years of experience in all aspects of hydraulic fracturing. Western Energy Alliance is happy to see that the list of nominees includes several such members of industry, and we encourage EPA to ensure that a significant number of these industry nominees are on the Hydraulic Fracturing Advisory Panel.

Western Energy Alliance believes that the Hydraulic Fracturing Advisory Panel can positively impact the focus and direction of the EPA hydraulic fracturing study. However, it is essential to appoint a balanced and diverse group of experts to the panel. We believe it is important for EPA to select a panel of individuals with relevant scientific and engineering expertise. This should include those who have practical experience with all aspects of hydraulic fracturing. This will ensure the study remains useful for decision-making and provides practical, scientifically robust results. Nominees chosen for the panel should have a proven track record of rigorous and objective work in their areas of technical knowledge.

Nominees with a history of unfounded bias against hydraulic fracturing or oil and natural gas development are not appropriate for an advisory panel whose purpose is to "provide advice and review the *'Progress Report: Potential Impacts of Hydraulic Fracturing on Drinking Water Resources,'*" and Western Energy Alliance believes EPA should not include such individuals. Unfortunately, there are several nominees who have shown publicly their bias against hydraulic fracturing and oil and natural gas development. We provide a list below. Western Energy Alliance comments –Comments on EPA Science Advisory Board Hydraulic Fracturing Advisory Panel Nominees December 19, 2012

Page 2 of 2

Michel Boufadel, Ph.D.  
Robert Howarth, Ph.D.  
Anthony Ingrefea, Ph.D.  
Lisa McKenzie, Ph.D.  
Karlis Muehlenbachs, Ph.D.  
Deborah Swackhammer, Ph.D.  
Geoffrey Thyne, Ph.D.  
Jeanne Vanbriesen, Ph.D.  
Avner Vengosh, Ph.D.  
Perry Walker, Ph.D.  
Lauren Zeise, Ph.D.

These individuals have abandoned their objective, uninterested scientific credentials by working with and accepting funding from those advocating against the oil and natural gas industry or by publishing error-filled papers on oil and gas operations. Many of these authors have refused to correct their findings even when other scientists unconnected to the oil and gas industry point out their errors. This behavior leads us to question their willingness to objectively review EPA's progress report.

Thank you for the opportunity to comment on the list of nominees for EPA's Hydraulic Fracturing Advisory Panel. Western Energy Alliance hopes EPA will honestly evaluate the credentials of the industry nominees and include many of them on the panel.

Sincerely,

Kathleen M. Sgamma  
VP, Government & Public Affairs  
Western Energy Alliance

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming

environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates for inclusion on the SAB based**

either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

68. Stephen Almond, MeadWestvaco
69. W. Kenneth Armagost, Andarko Petroleum
70. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://pr.newswire), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
71. Stephen Bachu
72. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
73. Fred Baldassare, Conflict of interest.
74. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
75. Thomas R. Bratton, Schlumberger Technology. Conflict of interest.
76. James Bruckner—financial ties to industry
77. David Burnett
78. Buscheck, Timothy E
79. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: "In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal *Environmental Health Perspectives* about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest."
80. Corrie Clark

81. Scott Bradley Cline
82. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
83. James W. Collins
84. John Corra—WY political conflict of interest
85. Eric Daniels (Chevron)
86. Thomas Davis, CO School of Mines
87. Joseph deGeorge (Merck)
88. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
89. Lloyd East (Halliburton)
90. Michael Economides, (consultant; editor-in-chief Energy Tribune)
91. Timothy Ellison (Exxon-Mobil)
92. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
93. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

94. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))
95. Gordon Fassett, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...”

(hdrinc.com) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

96. John V. Fontana, Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."
97. Thomas D. Hayes, Gas Technology Institute E&P Center: extensive financial ties to industry
98. Walter R. Hufford, Talisman Energy USA 30 years' experience in "energy industry"
99. Ron Hyden, Director of Technology for Halliburton's Production Enhancement
100. Stephen Jester, ConocoPhillips
101. George E. King, Apache Corp.
102. Gary Klecka, worked for Dow for most of this career; now an independent consultant
103. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."
104. Steven Lewis, Exxon-Mobil for most of his career.
105. Abby Li, most of her career at Monsanto
106. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)
107. Keith Wilson Lynch
108. Dean Malouta (most of his career with Shell)
109. Steve Mamerow (Pioneer Natural Resources)
110. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
111. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
112. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
113. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
114. KJ Nygaard, Exxon Mobil
115. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
116. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
117. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.

118. Thomas Parkerton, Exxon Mobil entire career
119. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having **“developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+)**. In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations.”
120. Richard Phillips, Exxon Mobil since 1988
121. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.
122. Danny Reible
123. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.
124. Bert Smith, Chesapeake
125. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)
126. Joseph Patrick Smith, Exxon
127. Richard K Smith, Nabbors Production Company
128. Paul Street, Nalco chemical company
129. Talib Syed – not a scientist. Production engineer, whole career has been in industry.
130. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

131. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
132. Sanjay Vittale, Shell Oil
133. Douglas Wyatt, URS Corporation—conflict of interest
134. Victor Ziegler, Occidental Petroleum

Sincerely,  
Jamie Sitko

USEPA Science Advisory Board (1400R)  
1200 Pennsylvania Ave., N.W.  
Washington, D.C. 20460

December 17, 2012

RE: Federal Register Notice, Vol. 77, Number 162, Pages 50505-50506 and list of candidates announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please enter this letter into the record as my recommendations and comments on the nomination of candidates for inclusion on the Science Advisory Board on Hydraulic Fracturing.

I wish to recommend the following 26 persons to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. Following this list is a second list of those whose appointment I strongly oppose. Based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of

ability to be impartial, as evidenced in their publications and public speaking, I urge the USEPA to reject them as candidates for this committee. Many in this list also do not have complete conflict of interest disclosures in their bios.

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased greenhouse gas emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.

Please consider appointing your committee from the following 26 people. These are individuals with ample documented evidence of scientific objectivity and appropriate expertise:

1. Henry Anderson
2. Michel Boufadel
3. Susan Brantley
4. Bruce Brownawell
5. Janice Chambers
6. David A. Dzombak
7. Robert Edstrom
8. Elaine M. Faustman, Professor Depy. of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine, University of Washington
9. Dr. Madelon L. Finkel, Professor of Clinical Public Health and Director of the Office of Global Health, Weill Medical College, Cornell University
10. Fred M. Henretig, University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald, statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. James Northrup
18. Dr. Ingrid Padilla, Professor, Environmental and Water Resources Engineering, Department of Civil Engineering and Surveying; and Director of the Environmental Engineering Laboratory (EEL), University of Puerto Rico, Mayagüez
19. Jerome Paulson
20. Joseph N. Ryan, U. of Colorado, Boulder
21. Daniel Schlenk
22. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy, Hubert H. Humphrey School of Public Affairs; and Co-Director of the University's Water Resources Center.
23. Geoffery Thyne
24. Jeanne Van Briessen
25. Avner Vengosh
26. Perry R. Walker

27. Paul Westerhoff

The scientific credibility of the EPA is damaged by committees with real or perceived bias.

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased greenhouse gas emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including greenhouse gas emissions) and water consumption. This scientific review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members, as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

Following is a list of those whose appointment I strongly oppose. Based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial, as evidenced in their publications and public speaking, I urge the USEPA to reject them as candidates for this committee. Many in this list also do not have complete conflict of interest disclosures in their bios.

The following 67 are UNACCEPTABLE candidates for inclusion on the SAB.

Please REJECT the nominations of the following:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12).
4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Fred Baldassare. Conflict of interest.
7. Terence Barry, Aquamost. Conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Thomas R. Bratton, Schlumberger Technology. Conflict of interest.
9. James Bruckner – financial ties to industry
10. David Burnett
11. Timothy E. Buscheck
12. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: “In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and a colleague wrote a letter to the technical journal Environmental Health Perspectives about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest.”
13. Corrie Clark
14. Scott Bradley Cline
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. James W. Collins
17. John Corra – WY political conflict of interest
18. Eric Daniels (Chevron)

19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Shari Dunn-Norman (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Michael Economides (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:  
[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Elsworth. <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking> All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate's inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last "hundreds of years" is another indication of the candidate's lack of inclination to evaluate this technology's ability to be protective of water and human health for future generations as USEPA's mandate requires.
27. James Erb – conflict of interest: consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))
28. Gordon Fassett, HDR Engineering, Inc. Not a scientist. A "water rights" specialist, who "after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission..." ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
29. John V. Fontana, Vista GeoScience LLC – conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."
30. Thomas D. Hayes, Gas Technology Institute E&P Center: extensive financial ties to industry
31. Walter R. Hufford, Talisman Energy USA; 30 years' experience in "energy industry"
32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement
33. Stephen Jester, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka – worked for Dow for most of this career; now an independent consultant
36. Philip Leber – "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."
37. Steven Lewis, Exxon-Mobil for most of his career
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO – believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)

40. Keith Wilson Lynch
41. Dean Malouta – most of his career with Shell
42. Steve Mamerow, Pioneer Natural Resources
43. Carl T. Montgomery, NSI Technologies – works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes – Baker Hughes Incorporated (NYSE: BHI) “creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.”
45. Michael Nickolaus – not a scientist, works for industry-funded (American Petroleum Institute among others) organizations
46. Jean-Philippe Nicot – funding not disclosed; extensive historic ties to industry; has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption
47. KJ Nygaard, Exxon Mobil
48. Jon Olson – funding from oil and gas companies’ consortium, Shell, and Exxon Mobil; Career has been to promote hydraulic fracturing
49. John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
50. Thomas Parkerton, Exxon Mobil for entire career
51. Deepak Patil – not a scientist; career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC, as described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having “developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+).
52. Richard Phillips, Exxon Mobil since 1988
53. Laura Plunkett, Integrative Biostrategies, LLC – industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad). Her presentations show bias as suggested by financial conflict of interest.
54. Danny Reible
55. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal”  
[lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-)

process#.UMrNpHPJlzc, revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.

56. Bert Smith, Chesapeake

57. Donald Siegel – discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, greenhouse gas emission, and climate crisis perspectives).

58. Joseph Patrick Smith, Exxon

59. Richard K Smith, Nabbors Production Company

60. Paul Street, Nalco chemical company

61. Talib Syed – not a scientist. Production engineer; entire career has been in industry.

62. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

63. Rock Vitale, Environmental Standards, Inc. – not a scientist, works entirely for industry “managing liability.” No advanced degree.

64. Sanjay Vittale, Shell Oil

65. Douglas Wyatt, URS Corporation – conflict of interest

66. Victor Ziegler, Occidental Petroleum

Thank you for your attention and review of the points brought forward in this letter. I look forward to knowing that you have formed a truly objective, unbiased and scientific Hydraulic Fracturing Science Advisory Board.

Yours sincerely,

Shelley Stark

RE: Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and list of candidates announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

FROM: Heather Cantino, Athens OH 45701

Dear Mr. Hanlon:

Please accept my comments on the nomination of candidates for possible inclusion on the Science Advisory Board (SAB) on Hydraulic Fracturing.

I have reviewed USEPA guidelines and criteria for this Board and support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

I recommend these 26 candidates based on their scientific expertise, knowledge, experience and ability to be both informed and impartial.

Following their names is a second list of those whose appointment I strongly oppose. I hope you will agree and reject them, based on USEPA written criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be

impartial as evidenced in their publications and public speaking. Many have also failed to complete conflict of interest disclosures in their bios.

it is essential that federal regulatory efforts avoid any taint of industry bias and conflicts of interest. Currently horizontal hydraulic fracturing is coming under increased scrutiny today as we learn more about the resulting water contamination, air pollution, increased greenhouse gas emissions and community disruption as well as illnesses and deaths of humans and animals. Any objective study will examine the overwhelming environmental and carbon footprints of this industrial process.

I hope you will select your committee from the following 26 people, whose biographies, background and public statements demonstrate scientific objectivity as well as expertise:

1. Anderson, Henry
2. Boufadel, Michel
3. Brantley, Susan
4. Brownawell, Bruce
5. Chambers, Janice
6. Dzombak, David A.
7. Edstrom, Robert
8. Faustman, Elaine M.
9. Finkel, Dr. Madelon L.
10. Henretig, Fred M.,
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy,

17. Dr. Ingrid Padilla
18. Jerome Paulson
19. Joseph N. Ryan
20. Daniel Schlenk
21. Dr. Karen Swackhamer
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

Obviously any perceived bias on the part of individuals or committees damages the scientific credibility of the EPA. Individuals or corporations which have a financial stake in the results of any decisions to regulate the industry cannot be considered unbiased. By law, EPA committees must be composed in a manner which ensures that industry bias is publicly disclosed, minimized, and eliminated if possible. My vote would be to eliminate those who have a clear bias related to corporate income or university research grants from companies related to the natural gas industry.

Clearly, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks of hydraulic fracking. They have a financial stake in reporting minimal negative effects of the several thousand toxic chemicals employed in hydraulic fracturing. Furthermore, they have shown cavalier attitudes toward community disruption and air pollution and underplay the longterm issue of withdrawing millions of gallons of water from the hydrological cycle forever.

I urge the EPA to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA would be damaged by committees with real or perceived bias.

SAB membership should exclude financially conflicted members as much as possible, and instead be largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues. Industry representatives with specific knowledge or expertise can be invited to address the committee during public meetings.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates. It is impossible to read their biographies without recognizing that they totally in thrall to industry; their careers would end should they oppose the most lenient possible regulation of hydraulic fracturing.

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)
4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley – Conflict of interest: consults regularly with industry per her cv.

13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman  
(<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry:  
[http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Elsworth  
<http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>  
: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute no, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry  
(NC presentation:  
[ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))
28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
31. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”
32. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement
33. Jester, Stephen, ConocoPhillips
34. George E. King, Apache Corp.
35. Gary Klecka, worked for Dow for most of this career; now an independent consultant
36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All’s Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties

to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.

47. Nygaard, KJ, Exxon Mobil

48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.

49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.

50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.

51. Thomas Parkerton, Exxon Mobil entire career

52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate:

[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already "better casing standards" as possibly being adequately protective.

([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing)

/) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that "gas as better than coal"

[lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or

objectivity, since the science increasingly suggests otherwise in terms of

lifecycle greenhouse gas emissions.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:

[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)),

also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabbors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation—conflict of interest

67. Victor Ziegler, Occidental Petroleum

Thank you for encouraging the public to comment on these nominations. It is regrettable less than a third of the nominees can demonstrate both expertise and a clear lack of industry ties or bias. Please keep the EPA's record/reputation clean and DO NOT seat the 67 on this critical committee.

Nancy Sullivan

Subject: US EPA's Science Advisory Board panel - comment

Ed Hanlon  
Designated Federal Officer  
EPA Science Advisory Board Staff Office

Dear Mr. Hanlon,

We are running out of time to control the release of carbons into our atmosphere if we are to avert disastrous temperature rises far exceeding the 2 degree C limit defined by the scientific community worldwide. The CO<sub>2</sub> we are releasing today will be with us and affecting our planet for the next 20,000 years. The EPA has allowed itself to be used as a facilitator for the fossil fuel industry for far too long. We need to start looking at the science not the economics of climate change. The earth does not care about job creation, the national debt, or any other policy governing our social order. It has its own rules and laws. It only responds to the record 7 billion tons of carbon per year that we pour into the air. You cannot haggle with a melting ice cap, you can't compromise with rising sea levels, you can't cut a deal with the greenhouse gases that are now boiling out of the Arctic Sea and the surrounding tundra. You cut the carbon emissions below 350 ppm or you watch the

Ganges,  
the Yang Tze, and many of our own major rivers run dry; you see Miami, New Orleans, Los Angeles, and Manhattan disappear under the sea; and you reduce the oceans to warm acidic broths incapable of sustaining anything but soft-bodied invertebrates, jellyfish, and sea worms. If you appoint advisers who do not grasp that the policy decisions they recommend today could be engineering another Permian Extinction in the coming decades then we as a species will step over the abyss. This is one of the most crucial decisions that you will make in your life. Look at the children you love and the future that you will leave to them and their families. Even those who have been entrusted with power and whose positions of privilege often insulate them from the consequences of their decisions will not be able to escape the impacts of short sighted and self-serving policies on the issue of climate change. We all share the same planet and nothing offers greater threat and destruction to the fabric of the social order you control than widespread natural disaster.

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Anthony Ingraffea
13. Lyman McDonald statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson

19. Joseph N. Ryan, U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne
23. Jeanne Van Briessen
24. Avner Vengosh
25. Perry R. Walker
26. Paul Westerhoff

The scientific credibility of the EPA is damaged by committees with real or perceived bias

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased greenhouse gas emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please **REJECT** the nominations of the following 67 **UNACCEPTABLE** candidates:

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a

good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/1jbFy>)

4. Stephen Bachu
5. E. Scott Bair - conflict of interest with financial ties to industry. Recent funding not listed.

44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus-not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
51. Thomas Parkerton, Exxon Mobil entire career
52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having "developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of

scale-causing metals, and removes compounds imparting color. Fe<sup>6+</sup> has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe<sup>6+</sup> can be wholly recycled and reused for well site-completion operations."

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC -industry consultant, conflict of interest. Presentation on "adequacy" of current regulations, deemed protection of children adequate:

[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already "better casing standards" as possibly being adequately protective.

([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/))

This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that "gas as better than coal"

[lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy:

[syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon

60. Richard K Smith, Nabbors Production Company

61. Paul Street, Nalco chemical company

62. Talib Syed - not a scientist. Production engineer, whole career has been in industry.

63. James John Tintera - not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.

64. Rock Vitale, Environmental Standards, Inc.-not a scientist, works entirely for industry "managing liability". No advanced degree.

65. Sanjay Vittale, Shell Oil

66. Douglas Wyatt, URS Corporation-conflict of interest

67. Victor Ziegler, Occidental Petroleum

Subject: List of candidates for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

My name is Theodore J. Voneida, and I live in Kent, Ohio. I have been researching the hydraulic fracturing issue for the past 2 1/2 years, and have lectured extensively against what these giant corporations are doing to our lands and our people from east to west coast. It is difficult, of course, for individuals like myself, and small groups of concerned citizens to counter the tremendous political pressure being exerted by these corporations, including the millions of dollars they are pouring into our legislators' and judges' coffers, especially now, with the recent Supreme Court Citizens United decision.

One of the few options open to us is to correspond with persons like yourself, with the hope that somewhere our voices will be heard. Specifically, I am referring to Federal Register Notice Volume 77, number 162, pp. 50505-06, and the candidates you have proposed for the Hydraulic Fracturing Science Advisory Board. I do not feel that these candidates have the expertise or qualifications to serve as members of this Board.

I do not wish to burden you with yet another long letter related to my concerns, but will simply convey to you the fact that I strongly support the email you recently received from Heather Cantino of Athens, Ohio, as well as the candidates for this Advisory Board that she listed in her correspondence.

Thank you for your consideration of our concerns and requests. Here in Ohio we are presently suffering from the rapacious invasion of our properties by corporations who are after the methane in our Utica Shale formation. The health of many individuals has been severely affected by drinking water which has been contaminated by the toxic chemicals used in the fracking operations. Property values are significantly affected by the proximity of properties to the drill sites. Local jobs provided by these corporations are few and far between; primarily short-term trucking jobs. The companies, understandably, bring their own highly trained drill crews with them as they move about. Our valuable and finite fresh water supplies are being seriously compromised and contaminated. Heather Cantino's correspondence does, in fact, cover most of these issues. Once again, I strongly support her email message to you.

Sincerely,

Theodore J. Voneida,

Ph.D.

**FROM:** Fred Welty, Chardon, Ohio 44024, Geauga Co.

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates based on their scientific expertise, knowledge, experience and ability to be impartial. *Following this list* is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject,

based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

**Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing to result in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest.**

**Please consider appointing your committee from the following 26 people, those who clearly show evidence of scientific objectivity and appropriate expertise:**

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce
5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert

8. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington

9. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University

10. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist

11. Robert Howarth

12. Anthony Ingraffea

13. Lyman McDonald statistician and biologist

14. Lisa McKenzie

15. Karlis Muehlenbach

16. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination

17. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez

18. Jerome Paulson

19. Joseph N. Ryan, U. of Colorado, Boulder

20. Daniel Schlenk

21. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.

22. Geoffery Thyne

23. Jeanne Van Briessen

24. Avner Vengosh

25. Perry R. Walker

26. Paul Westerhoff

**The scientific credibility of the EPA is damaged by committees with real or perceived bias**

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA. SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

**By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.**

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate*. **However, individuals with financial conflicts should not be serving as members of the SAB.**

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

**Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:**

1. Stephen Almond, MeadWestvaco
2. W. Kenneth Armagost, Andarko Petroleum
3. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://pr.newswire), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process.". (<http://s.tt/1jbFy>)
4. Stephen Bachu
5. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
6. Baldassare, Fred. Conflict of interest.
7. Terence Barry, Aquamost, conflict of interest: manufactures and sells an

advanced water purification device used to remediate wastewater from hydraulic fracturing operations

8. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
9. James Bruckner—financial ties to industry
10. Burnett, David
11. Buscheck, Timothy E
12. Gail Charnley – Conflict of interest: consults regularly with industry per her cv.
13. Corrie Clark
14. Cline, Scott Bradley
15. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
16. Collins, James W
17. Corra, John—WY political conflict of interest
18. Eric Daniels (Chevron)
19. Thomas Davis, CO School of Mines
20. Joseph deGeorge (Merck)
21. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East (Halliburton)
23. Economides, Michael (consultant; editor-in-chief Energy Tribune)
24. Timothy Ellison (Exxon-Mobil)
25. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
26. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water.

You can't say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn't an absolute *no*, but it's likely you won't develop connections between these because you get intervening beds of low permeability that don't allow transmission.' ...As for abandoned wells causing contamination, he stressed good management. 'Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.'"

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate's inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last "hundreds of years" is another indication of the candidate's lack of inclination to evaluate this technology's ability to be protective of water and human health for future generations as USEPA's mandate requires.

27. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf))

28. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A "water rights" specialist, who "after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission..." ([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor's in geology, "entire career has been in the private service and consulting industry."

30. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry

31. Hufford, Walter R., Talisman Energy USA 30 years' experience in "energy industry"

32. Ron Hyden, Director of Technology for Halliburton's Production Enhancement

33. Jester, Stephen, ConocoPhillips

34. George E. King, Apache Corp.

35. Gary Klecka, worked for Dow for most of this career; now an independent

consultant

36. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
37. Steven Lewis, Exxon-Mobil for most of his career.
38. Abby Li, most of her career at Monsanto
39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All’s Not Well)
40. Keith Wilson Lynch
41. Dean Malouta (most of his career with Shell)
42. Steve Mamerow (Pioneer Natural Resources)
43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
44. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
45. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
46. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
47. Nygaard, KJ, Exxon Mobil
48. Jon Olson funding from oil and gas companies’ consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.
49. John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
50. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance

industry, waste-to-energy industry, and oil and gas industry.

51. Thomas Parkerton, Exxon Mobil entire career

52. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having **“developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe<sup>6+</sup>)**. In a single dose, Fe<sup>6+</sup> can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe<sup>6+</sup> has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe<sup>6+</sup> can be wholly recycled and reused for well site-completion operations.”

53. Richard Phillips, Exxon Mobil since 1988

54. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:

[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective. ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)) This shows lack of expertise and understanding of existing evidence to the contrary. The candidate also states that “gas as better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of either knowledge or objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.

57. Bert Smith, Chesapeake

58. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air

pollution, ghg emission, and climate crisis perspectives)

59. Joseph Patrick Smith, Exxon
60. Richard K Smith, Nabbors Production Company
61. Paul Street, Nalco chemical company
62. Talib Syed – not a scientist. Production engineer, whole career has been in industry.
63. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
64. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
65. Sanjay Vittale, Shell Oil
66. Douglas Wyatt, URS Corporation—conflict of interest
67. Victor Ziegler, Occidental Petroleum

Sincerely,

Fred Welty

**RE:** Federal Register Notice Vol 77 Number 162 Pages 50505-50506 and [list of candidates](#) announced at [Yosemite.epa.gov](http://Yosemite.epa.gov) re public comment period on announced list for Hydraulic Fracturing Science Advisory Board

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I first list 26 names of candidates whom I support in appointment to the SAB for the USEPA Hydraulic Fracturing study, based on their scientific expertise, knowledge, experience and ability to be impartial. Following this list is a *second list* of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of

ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Please consider appointing your committee from the following 26 people who show appropriate expertise and scientific objectivity:

53. Henry Anderson
54. Boufadel, Michel
55. Susan Brantley
56. Brownawell, Bruce
57. Janice Chambers
58. Dzombak, David A.
59. Edstrom, Robert
60. Elaine M. Faustman, Professor Depy.of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
61. Dr. Madelon L. Finkel ,Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
62. Henretig, Fred M., University of Pennsylvania, pediatric toxicologist
63. Robert Howarth
64. Anthony Ingraffea
65. Lyman McDonald statistician and biologist
66. Lisa McKenzie
67. Karlis Muehlenbach
68. Eileen Murphy, Rutgers, toxicologist who has specialty in drinking water contamination
69. Dr. Ingrid Padilla, full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the

Environmental Engineering Laboratory (EEL) at the University of Puerto Rico,  
Mayagüez

70. Jerome Paulson

71. Joseph N. Ryan, U. of Colorado, Boulder

72. Daniel Schlenk

73. Dr. Karen Swackhamer, Professor of Science, Technology, and Public Policy in the  
Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's  
Water Resources Center.

74. Geoffery Thyne

75. Jeanne Van Briessen

76. Avner Vengosh

77. Perry R. Walker

78. Paul Westerhoff

Given the record of deep shale drilling and high pressure horizontal hydraulic fracturing links to water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans and animals, and the overwhelming environmental and carbon footprints of this industrial process, it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

I respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this vital mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, industry-employed scientists and scientists working for industry-supported research institutions tend to downplay risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This SCIENTIFIC review board must be composed in a manner that ensures that this extensive bias does not influence panel decisions.

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues. If industry representatives have

specific knowledge or expertise of value to the deliberations of a committee, *then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.*

**The following 67 are all unacceptable candidates** for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial *as evidenced in their publications and public speaking*. Many in this list also do *not* have complete conflict of interest disclosures in their bios.

Please REJECT the nominations of the following 67 UNACCEPTABLE candidates:

135. Stephen Almond, MeadWestvaco
136. W. Kenneth Armagost, Andarko Petroleum
137. Dan Arthur: ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories) Dallas, 4-16-12). Regarding statements that there are threats to the environment, Mr. Arthur stated, "These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality." And from [PR Newswire](http://prnewswire.com), "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process.". (<http://s.tt/1jbFy>)
138. Stephen Bachu
139. E. Scott Bair – conflict of interest with financial ties to industry. Recent funding not listed.
140. Baldassare, Fred. Conflict of interest.
141. Terence Barry, Aquamost, conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
142. Bratton, Thomas R. Schlumberger Technology. Conflict of interest.
143. James Bruckner—financial ties to industry
144. Burnett, David
145. Buscheck, Timothy E
146. Gail Charnley. Conflict of interest: consults regularly with industry per her cv. According to the Washington Post: "In 2006, for example, she wrote an op-ed article in the St. Louis Post-Dispatch opposing tougher restrictions on power-plant emissions in neighboring Illinois on behalf of Americans for Balanced Energy Choices, a nonprofit group funded by utilities, railroads and mining companies. In 2004, she and

a colleague wrote a letter to the technical journal *Environmental Health Perspectives* about a study on human testing of pesticides that they had co-authored without disclosing that it had been funded partly by pesticide makers. The journal's editor ran a disclosure after Charnley and her colleague disputed having a conflict of interest.”

147. Corrie Clark
148. Cline, Scott Bradley
149. Nancy Pees Coleman (<http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGasNancyColeman-8-7-12.pdf>)
150. Collins, James W
151. Corra, John—WY political conflict of interest
152. Eric Daniels (Chevron)
153. Thomas Davis, CO School of Mines
154. Joseph deGeorge (Merck)
155. Dunn-Norman, Shari (current and past funding from oil companies and Am. Petroleum Inst.)
156. Lloyd East (Halliburton)
157. Economides, Michael (consultant; editor-in-chief Energy Tribune)
158. Timothy Ellison (Exxon-Mobil)
159. Stuart Ellsworth (Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking))
160. Derek Elsworth <http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>: “One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful. ‘Certainly you’re making pathways in the deep strata that didn’t previously exist, but those are maybe a couple of kilometres away from your drinking water. You can’t say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn’t an absolute *no*, but it’s likely you won’t develop connections between these because you get intervening beds of low permeability that don’t allow transmission.’ ...As for abandoned wells causing contamination, he stressed good management. ‘Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.’”

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate’s inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last “hundreds of years” is another indication of the candidate’s lack of inclination to evaluate this technology’s ability to be protective of water and human health for future generations as USEPA’s mandate requires.

161. James Erb: conflict of interest--consultant to oil and gas industry (NC presentation: [ncleg.net/documents/sites/committees/EPI-](http://ncleg.net/documents/sites/committees/EPI-)

LRC/Meetings/2012%20January%2018/Presentations%20and%20Handouts/Erb%20-%20Written%20Comments%20before%20the%20the%20Committee.pdf)

162. Fassett, Gordon, HDR Engineering, Inc. Not a scientist. A “water rights” specialist, who “after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission...” (hdrinc.com) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.
163. Fontana, John V., Vista GeoScience LLC conflict of interest. Not a scientist. Has a bachelor’s in geology, “entire career has been in the private service and consulting industry.”
164. Hayes, Thomas D., Gas Technology Institute E&P Center: extensive financial ties to industry
165. Hufford, Walter R., Talisman Energy USA 30 years’ experience in “energy industry”
166. Ron Hyden, Director of Technology for Halliburton’s Production Enhancement
167. Jester, Stephen, ConocoPhillips
168. George E. King, Apache Corp.
169. Gary Klecka, worked for Dow for most of this career; now an independent consultant
170. Philip Leber “For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products.”
171. Steven Lewis, Exxon-Mobil for most of his career.
172. Abby Li, most of her career at Monsanto
173. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All’s Not Well)
174. Keith Wilson Lynch
175. Dean Malouta (most of his career with Shell)
176. Steve Mamerow (Pioneer Natural Resources)
177. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry
178. Daniel Moos, Baker Hughes: Baker Hughes Incorporated (NYSE: BHI) creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.
179. Michael Nickolaus—not a scientist, works for industry-funded (American Petroleum Institute among others) organization.
180. Jean-Philippe Nicot: funding not disclosed, extensive historic ties to industry, has touted economic benefit to municipalities of selling water while not distinguishing between water use and water consumption.
181. Nygaard, KJ, Exxon Mobil
182. Jon Olson funding from oil and gas companies’ consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.

183. John Oneacre, Ground Water Solutions, providing “consulting services to private industry.” Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies.
184. Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydrogeological consulting services to private industry with emphasis on environmental studies and litigation support work. Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.
185. Thomas Parkerton, Exxon Mobil entire career
186. Deepak Patil, not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with **Eagle One Green Solutions, LLC** described in the Marcellus Shale Coalition exposition program list of sponsors ([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having **“developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe<sub>6</sub>+).** In a single dose, Fe<sub>6</sub>+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe<sub>6</sub>+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe<sub>6</sub>+ can be wholly recycled and reused for well site-completion operations.”
187. Richard Phillips, Exxon Mobil since 1988
188. Laura Plunkett, Integrative Biostrategies, LLC –industry consultant, conflict of interest. Presentation on “adequacy” of current regulations, deemed protection of children adequate:  
[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)  
Her presentations show bias as suggested by financial conflict of interest.
189. Danny Reible
190. James Saiers states he believes intervening rock will/does protect water from contamination and cites already “better casing standards” as possibly being adequately protective ([environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing/)), revealing his lack of expertise and understanding of the existing substantive evidence to the contrary. The candidate also states that “gas is better than coal” [lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing his lack of either knowledge or objectivity, since the science on lifecycle greenhouse gas emissions increasingly suggests otherwise.
191. Bert Smith, Chesapeake
192. Donald Siegel (discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also

disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives)

193. Joseph Patrick Smith, Exxon
194. Richard K Smith, Nabbors Production Company
195. Paul Street, Nalco chemical company
196. Talib Syed – not a scientist. Production engineer, whole career has been in industry.
197. James John Tintera – not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
198. Rock Vitale, Environmental Standards, Inc.—not a scientist, works entirely for industry “managing liability”. No advanced degree.
199. Sanjay Vittale, Shell Oil
200. Douglas Wyatt, URS Corporation—conflict of interest
201. Victor Ziegler, Occidental Petroleum

Sincerely,  
Sasha White  
Athens, Ohio 45701

From: Jan Williams  
To: Edward Hanlon/DC/USEPA/US@EPA  
Date: 12/19/2012 06:52 PM  
Subject: This is very important to me.

Dear Mr. Hanlon:

Please accept and convey the following as my comments on the nomination of candidates for possible inclusion on the Science Advisory Board on Hydraulic Fracturing.

I am writing to support the appointment of the following 26 names to the SAB for the USEPA Hydraulic Fracturing study.

Per USEPA guidelines and criteria, I support these 26 candidates named in the 1st list based on their scientific expertise, knowledge, experience and ability to be impartial. Following this list is a 2nd list of those whose appointment I strongly oppose and urge USEPA to reject, based on USEPA criteria and either their direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

Given the empirically proven record of these industrial processes—deep shale drilling and high pressure horizontal hydraulic fracturing results in water contamination, air pollution, increased ghg emissions, community disruption, illnesses, and deaths of humans, flora and fauna, and the overwhelming environmental and carbon footprints—it is essential that federal regulatory efforts be painstakingly clear of industry bias and conflicts of interest. The scientific credibility of the EPA is damaged by committees with real or perceived bias

The following is my 1st list: that of those persons I am suggesting, persons whose actions have evinced scientific objectivity and appropriate expertise.

Please consider appointing your committee from the following 26 people:

1. Henry Anderson
2. Boufadel, Michel
3. Susan Brantley
4. Brownawell, Bruce

5. Janice Chambers
6. Dzombak, David A.
7. Edstrom, Robert
8. Elaine M. Faustman - Professor Depy. of Environmental and Occupational Health Sciences and Director of the Institute for Risk Analysis and Risk Communication in the School of Public Health and Community Medicine at the University of Washington
9. Dr. Madelon L. Finkel - Professor of Clinical Public Health and Director of the Office of Global Health at the Weill Medical College, Cornell University
10. Dr. Henretig, Fred M. - University of Pennsylvania, pediatric toxicologist
11. Robert Howarth
12. Dr. Anthony Ingraffea
13. Dr. Lyman McDonald - statistician and biologist
14. Lisa McKenzie
15. Karlis Muehlenbach
16. Dr. Eileen Murphy - Rutgers, toxicologist who has specialty in drinking water contamination
17. Dr. Ingrid Padilla - full professor in Environmental and Water Resources Engineering in the Department of Civil Engineering and Surveying and the Director of the Environmental Engineering Laboratory (EEL) at the University of Puerto Rico, Mayagüez
18. Jerome Paulson
19. Joseph N. Ryan - U. of Colorado, Boulder
20. Daniel Schlenk
21. Dr. Karen Swackhamer - Professor of Science, Technology, and Public Policy in the Hubert H. Humphrey School of Public Affairs, and Co-Director of the University's Water Resources Center.
22. Geoffery Thyne

23. Jeanne Van Briessen

24. Avner Vengosh

25. Perry R. Walker

26. Paul Westerhoff

To repeat: it is essential that federal research efforts be painstakingly clear of industry bias and conflicts of interest.

Further, I would respectfully remind USEPA of its professional and legal duty to select board members who adequately represent the protection of public health and the environment, consistent with the mission of EPA. The Agency cannot accomplish this cornerstone mission if its regulatory priorities and health concerns are dictated by people who have a financial stake in encouraging EPA to do as little as possible to regulate their products.

On the whole, it is in the interest of all industry-employed scientists and scientists working for industry-supported research institutions to downplay the summary risks and effects of toxic chemicals, community disruption, air pollution (including ghg emissions) and water consumption. This composition of this SCIENTIFIC review board must ensure that this extensive bias does not influence panel decisions.

The mission of the SAB is to provide credible and independent scientific analysis and advice to government. The Board cannot accomplish this vital mission if its objectives and deliberations reflect strong bias. Committees whose members have conflicts of interest or a strong bias toward the perspective of regulated industries undermine the credibility of the EPA.

SAB should make strong efforts to protect its objectivity, integrity, independence, and competence as its most valuable asset. The scientific credibility of the SAB and the EPA is damaged by committees with real or perceived bias.

By law, EPA committees must be composed in order to ensure that industry bias is publicly disclosed, minimized, and eliminated if possible.

The Federal Advisory Committee Act (FACA) imposes requirements on agencies when they establish or utilize any advisory committee, defined as a group of individuals, including at least one non-federal employee, which provides collective advice or recommendations to the agency. 5 U.S.C. App. II, § 3(2). When an agency seeks to obtain such advice or recommendations, it must ensure the advisory committee is "in the public interest," *id.* App. II, § 9(2), is "fairly balanced in terms of points of view represented and the function to be performed," *id.* § 5(b)(2), and does not contain members with inappropriate special interests. *Id.* § 5(b)(3).

Committee membership should exclude financially conflicted members as much as possible, so that committees are largely composed of scientists who are able to provide a fair and complete review of all relevant data or issues.

If industry representatives have specific knowledge or expertise of value to the deliberations of a committee, then invitations to address the committee during public meetings are appropriate. However, individuals with financial conflicts should not be serving as members of the SAB.

The following 67 are all unacceptable candidates for inclusion on the SAB based either on direct conflicts of interest, lack of scientific expertise, and/or clear lack of ability to be impartial as evidenced in their publications and public speaking. Many in this list also do not have complete conflict of interest disclosures in their bios.

My 2nd list is of 67 UNACCEPTABLE candidates. Please REJECT the nominations of the following persons:

1. Stephen Almond - MeadWestvaco
2. W. Kenneth Armagost - Andarko Petroleum
3. Dan Arthur - ALL Consulting. Clear conflict of interest, as Mr. Arthur works completely with and for industry. His inability to be unbiased and accept the emerging science and record of spills and contamination is also revealed, in quotes in a recent (4-16-12) Dallas Examiner newspaper article ([examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories](http://examiner.com/article/rival-energy-interests-funding-false-fracking-scare-stories)).

Regarding statements that there are threats to the environment, Mr. Arthur stated:

"These (state regulatory agencies) have field inspectors, rules and regulations, if you're a bad actor, not doing a good job, they're going to find you. It's something people are fearful of, but it's not a reality."

And from PR Newswire, "The report finds that B.C. and Alberta, along with other provinces in Canada, have regulations in place to protect the environment, water and human health" comments Dan Arthur, lead researcher [of the report, which was funded by Canadian petroleum associations] and President of ALL Consulting. "This includes regulatory requirements for surface casing, cementing, groundwater protection and pressure testing. Although no two shale plays are alike, experience and continued research have improved the effectiveness of the fracturing process and allowed the use of fewer, and more environmentally safe, ingredients in the fracturing process." (<http://s.tt/ljbFy>)

4. Stephen Bachu
5. E. Scott Bair - Conflict of interest with financial ties to industry. Recent funding not

listed.

6. Fred Baldassare - Conflict of interest.
7. Terence Barry Aquamost - Conflict of interest: manufactures and sells an advanced water purification device used to remediate wastewater from hydraulic fracturing operations
8. Thomas R. Bratton, Schlumberger Technology - Conflict of interest.
9. James Bruckner - financial ties to industry
10. David Burnett
11. Timothy E. Buscheck
12. Gail Charnley - Conflict of interest: consults regularly with industry per her cv.
13. Corrie Clark
14. Scott Bradley Cline
15. Nancy Pees Coleman - Conflict of interest: <http://nemc.us/docs/2012/presentations/Tue-PM-ShaleGas-NancyColeman-8-7-12.pdf>
16. James W Collins
17. John Corra - WY political conflict of interest
18. Eric Daniels - Chevron
19. Thomas Davis - CO School of Mines
20. Joseph deGeorge - Merck
21. Shari Dunn-Norman - current and past funding from oil companies and Am. Petroleum Inst.)
22. Lloyd East - Halliburton
23. Michael Economides - consultant; editor-in-chief Energy Tribune
24. Timothy Ellison - Exxon-Mobil
25. Stuart Ellsworth - Colorado Gas Commission and apologist for industry: [http://www.journal-advocate.com/sterling-local\\_news/ci\\_22022348/league-women-voters-gets-dirt-hydrofracking](http://www.journal-advocate.com/sterling-local_news/ci_22022348/league-women-voters-gets-dirt-hydrofracking)
26. Derek Elsworth  
<http://www.sciencewa.net.au/topics/industry-a-resources/item/1429-visiting-professor-weighs-in-on-fracking>:

"One of these concerns [with deep-shale drilling and high-volume horizontal hydraulic fracturing] is groundwater contamination from fracking fluid, which Dr Elsworth regarded as doubtful.

'Certainly you're making pathways in the deep strata that didn't previously exist, but those are maybe a couple of kilometres away from your drinking water. You can't say absolutely what the effects will be, but you can hazard a guess at connections you develop. You can certainly measure for them, looking at flow rates, permeability, tracers and how fast tracers move. This isn't an absolute no, but it's likely you won't develop connections between these because you get intervening beds of low permeability that don't allow transmission.' ...

As for abandoned wells causing contamination, he stressed good management.

'Well bores have been used in petroleum industry for the last hundred years, and if you know where they are and you manage and build them properly they can last for a long period of time. If we design repositories for radioactive waste disposal, it seems to me we can have some certainty we can design things for hundreds of years.'"

All of these statements by the candidate are contradicted by experts in the industry itself as well as growing scientific and field data. These statements indicate the candidate's inability to be unbiased and evaluate scientific data impartially. His advocacy of wells that merely last "hundreds of years" is another indication of the candidate's lack of inclination to evaluate this technology's ability to be protective of water and human health for future generations as USEPA's mandate requires.

27. James Erb - Conflict of interest. Consultant to oil and gas industry.

NC presentation:

[ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012](http://ncleg.net/documents/sites/committees/EPI-LRC/Meetings/2012) January 18/Presentations and Handouts/Erb -- Written Comments before the the Committee.pdf)

28. Fassett, Gordon - HDR Engineering, Inc. Not a scientist. A "water rights" specialist, who "after leaving state government, was appointed in 2002 by President Bush to be the federal representative and chairman of the Red River Compact Commission..."

([hdrinc.com](http://hdrinc.com)) Does not have water protection for the public good as a value. Bias inappropriate to this SAB.

29. John V. Fontana - Conflict of interest. Vista GeoScience LLC. Not a scientist. Has an undergraduate degree in geology, "entire career has been in the private service and consulting industry."

30. Thomas D. Hayes - Gas Technology Institute E&P Center. Has extensive financial ties to industry

31. Walter R. Hufford - Talisman Energy USA. Has 30 years' experience in "energy industry."

32. Ron Hyden - Director of Technology for Halliburton's Production Enhancement.

33. Jester, Stephen - ConocoPhillips

34. George E. King - Apache Corp.

35. Gary Klecka - worked for Dow for most of this career. Now an independent consultant.

36. Philip Leber "For 20+ years of his career, he was employed by producers of commodity chemicals, pesticides, lubricants, and polymeric products."

37. Steven Lewis, Exxon-Mobil for most of his career.

38. Abby Li, most of her career at Monsanto

39. Sean Lieske, CO, believes regulations are adequate in spite of extensive contamination of CO water supplies by fracking (Aurora CO Sentinel 10-27-11, All's Not Well)

40. Keith Wilson Lynch

41. Dean Malouta (most of his career with Shell)

42. Steve Mamerow (Pioneer Natural Resources)

43. Carl T. Montgomery, NSI Technologies works for industry, paid promoter of industry

44. Daniel Moos - Baker Hughes Incorporated (NYSE: BHI):

Creates value from oil and gas reservoirs with high-performance drilling, evaluation, completions and production technology and services, integrated operations and reservoir consulting. Our solutions are designed to lower costs, reduce risk or improve productivity for the global oil and gas industry.

45. Michael Nickolaus - Not a scientist. Works for industry-funded organization: American Petroleum Institute (among others).

46. Jean-Philippe Nicot - Funding not disclosed. Extensive historic ties to industry. Has

touted economic benefit to municipalities of selling water, while not distinguishing between water use and water consumption.

47. KJ Nygaard - Exxon Mobil

48. Jon Olson - Funding from oil and gas companies' consortium, Shell, and Exxon Mobil. Career has been to promote hydraulic fracturing.

49. John Oneacre - Employee of Ground Water Solutions, providing: "consulting services to private industry." Clients include American Petroleum Institute, Conoco Phillips, Total, and dozens of other fossil fuel production companies. 50.

Mr. Oneacre is President of Ground Water Solutions, Ltd. (GWS) and provides hydro-geological consulting services to private industry with emphasis on environmental studies and litigation support work.

Clients from a broad spectrum include the solid waste industry, petrochemical industry, chemical industry, insurance industry, waste-to-energy industry, and oil and gas industry.

51. Thomas Parkerton - Exxon Mobil entire career

52. Deepak Patil - not a scientist, career has been for multinational corporations and as consultant to industry. Designs chemicals. Clear conflict of interest in current employment with Eagle One Green Solutions, LLC.

Described in the Marcellus Shale Coalition exposition program list of sponsors

([sgicc.org/technology-showcase-sponsors.html](http://sgicc.org/technology-showcase-sponsors.html)) as having:

"developed a treatment for recycling hydraulic fracturing waters using ferrate (Fe6+). In a single dose, Fe6+ can simultaneously perform as an oxidant, coagulant, anti-foulant, disinfectant, and deodorant; and it reduces the formation of scale-causing metals, and removes compounds imparting color. Fe6+ has been used to achieve a total kill of sulfate reducing bacteria and acid producing bacteria in flowback waters, and significantly reduced soluble barium, calcium, iron, manganese, phosphorous, silicon and strontium in production waters. Flowback and produced waters treated with Fe6+ can be wholly recycled and reused for well site-completion operations."

53. Richard Phillips - Employee of Exxon Mobil since 1988

54. Laura Plunkett - Integrative Biostrategies, LLC. An industry consultant with a clear conflict of interest. Known for presentation on "adequacy" of current regulations, whereby the protection of children was in fact deemed adequate:

[epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore\\_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad](http://epw.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=3f513e57-b2ec-43b8-abe7-d1991ccc92ad)

Her presentations show bias as suggested by financial conflict of interest.

55. Danny Reible

56. James Saiers - On record as stating that he believes intervening rock will/does protect water from contamination and cites already "better casing standards" as possibly being adequately protective:

[environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing](http://environment.yale.edu/news/article/yale-panel-to-debate-hydraulic-fracturing)

This demonstrates a lack of expertise and understanding of existing evidence to the contrary. The candidate also states that "gas is better than coal"

[lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc](http://lubbockonline.com/national-news/2012-09-22/global-protests-planned-over-gas-drilling-process#.UMrNpHPjlzc), revealing lack of both knowledge and objectivity, since the science increasingly suggests otherwise in terms of lifecycle greenhouse gas emissions.

- 57. Bert Smith - Employed by Chesapeake Energy
- 58. Donald Siegel - discusses how drilling and recovery can be done safely without impacts to humans or ecosystems if adequate safeguards are employed throughout the process. This shows a clear bias, since the science is not out to show it can be done safely. It is not being done safely so far. Siegel claims gas is clean energy: [syracuse.com/news/index.ssf/2010/05/some\\_scientists\\_sat\\_hydrofrack.html](http://syracuse.com/news/index.ssf/2010/05/some_scientists_sat_hydrofrack.html)), also disclosing bias, since there is growing science to show it is not clean (from air pollution, ghg emission, and climate crisis perspectives).
- 59. Joseph Patrick Smith - Exxon
- 60. Richard K Smith - Nabors Production Company
- 61. Paul Street - Nalco chemical company
- 62. Talib Syed - Not a scientist. A production engineer whose whole career has been in industry.
- 63. James John Tintera - Not a scientist (no PhD.) but a private consultant to industry with a background in regulation. Conflict of interest.
- 64. Rock Vitale - Environmental Standards, Inc. Not a scientist, works entirely for industry "managing liability." No advanced degree.
- 65. Sanjay Vittale - Employed by Shell Oil
- 66. Douglas Wyatt - URS Corporation. Conflict of interest
- 67. Victor Ziegler - Employed by Occidental Petroleum

Thank you for your attention,

Jan Williams
